CRAMER ELECTRONICS, INC. • 85 WELLS AVENUE, NEWTON, MASS. 02159

T. X. CRONIN
PRESIDENT

Dear Cramer Customer,

This 1972 Cramer's Buyer's Guide is the finest catalog of electronic components ever compiled. All the quality products listed here are stocked by one or more of 33 locations through the United States and Canada.

Each location is a separate Cramer division, in business to serve local customer requirements. Each is staffed with a team of distribution professionals, specially trained to meet your needs.

Our 33 stocking locations are supported by the most modern distribution facility in the world. Our headquarters in Newton is 80,000 square feet big and uses the most up to date equipment and methods to make sure you get the best service possible.

For instance, our unique Air-Pac delivery system lets you call your local Cramer office and order any component in this catalog. Even if it's not in local stock, your order will be delivered to you the next day. Air-Pac delivery means 24 hour service, anywhere in the country.

Every Cramer division prides itself on local service by local people with total backup being the big plus.

Call your nearest Cramer location with any component requirement. Let us show you how we've built our business on service.

Sincerely,

T. X. Cronin
President

# Cramer International

Our International Division provides our overseas customers with all of the CRAMER TOTAL SERVICE facilities, assuring you of a single source of supply for ALL your electronic components and equipment requirements, at competitive prices for fast, fast delivery.

Not only that, we can extend to you the best possible payment terms merited by your organization, including in many cases, payment in local currency. No need for letter of credit, sight draft, payment in advance or other strict and costly payment terms.

## EA1400 128 BIT READ-WRITE RANDOM ACCESS MEMORY (RAM)

Requires a single phase clock strobe pulse which is used to refresh the data stored in the memory cells simultaneously and to change the data stored in a cell in the write mode. PD=300 mW. In 16-lead metal-ceramic hermetic DIP.

**EA1400 128 Bit Read-Write RAM**—Net Ea., 1-24.... **$36.00***

Electronic Arrays is a leading supplier of standard, high quality MOS products. They have been selected and designed to provide compatible, off-the-shelf MOS products for a broad range of digital systems applications including computer terminal, peripheral equipment, calculators, business machines, machine tool controls, instrumentation, minicomputers and checkout equipment, both military and industrial.

## READ ONLY MEMORIES (ROM)

### DYNAMIC 2-PHASE

All are supplied in 24-lead dual inline package. Clock voltage swing, 24 volts. Total typical PDISS, 90 mW except as otherwise noted.

| EA Number | Description | Total No. Bits | Max. Oper. MHz | Net Each, 1-24* |

## STANDARD CALCULATOR CIRCUIT SETS

Electronic Arrays is the leading supplier of standard calculator circuit sets. Designed specifically for desk top use, these sets are ideal for instrumentation and data handling systems. Used to their fullest capability, the sets can perform the functions of add, subtract, multiply, divide, square and square-root. The circuits are provided in 24-pin dual inline, hermetic and silicone molded packages.

### ALGEBRAIC ENTRY SEQUENCE

Decimal point system is selectable fixed input and output; set by keyboard. Models EAS-110 and EAS-111 offer 6 functions: +, −, ×, ÷, N² and square root of N. All others offer 4 functions: +, −, × and ÷. **Stored Constant:** 1.

| Set Model No. | No. of MOS/LSI Chips | Digits Entry | Digits Displayed | Memory | Net per Set 1-10* |

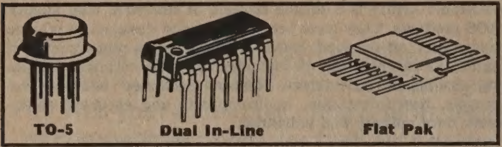
# MICROLOGIC® DIGITAL INTEGRATED CIRCUITS



Fairchild Micrologic elements are a set of compatible, integrated logic building blocks. Elements are manufactured using the Fairchild Planar Epitaxial Process by which all the necessary transistors and resistors are diffused into a single silicon wafer.

## DIGITAL INTEGRATED CIRCUITS

Fairchild offers a broad line of digital integrated circuits, including CUL, DTL, ECL, RTL and TTL. The TTL family consists of logic, memory and interface functions—a unique blend of Fairchild proprietary circuits and a large number of second source devices which have achieved wide market acceptance. DTL and TTL products are available in two operating temperature ranges: 59X (7400) for 0° C to +75° C or 51X (5400) for −55° C to +125° C. The series listed below are in ceramic Dual In-Line™ packages except as otherwise noted. Also available in 14-, 16- and 24-pin flatpacks and Cerpaks.

### SERIES 93L LOW POWER TTL/MSI

Series 93L low power TTL/MSI product line features low power (one-fourth that of standard TTL) at 10 MHz clock frequencies. Functional and pin-compatible with standard 93 TTL/MSI.

## TTL MEMORIES

Fairchild TTL memory product line includes a variety of high speed memory devices suitable for use in all types of data processing equipment. Three general types of memory products are included in the TTL line: Read Only Memories (ROM), Random Access Read/Write Memories (RAM) and Associative or Content Addressable Memories (CAM). All are widely used in the industry and system oriented for the best possible speed/power ratios available today.

## SERIES 9500 HIGH SPEED LOGIC ECL

Fairchild ECL offers both maximum speed performance and optimum logic flexibility in the design of high speed systems. Temperature compensated; logic levels remain constant across range of 0° C to +75° C. The series features high input/low output impedance, complementary outputs/wire-OR capability, high noise margin, low edge speed and constant supply current drain. In 6B Dual In-Line™ package.

## HYBRID CIRCUITS

### HIGH VOLTAGE, HIGH CURRENT DRIVER

High current capability: 250 mA sinking current at 0.5 volt. High voltage capability: 40 volts $LV_{CEO}$. High speed: $t_{on}=70$ nsec (typical); $t_{off}=110$ nsec (typical). Specify 10-lead TO-100 or ¼" x ¼" Flat Pak.

| Fairchild Type | Operating Temperature | Net Each, Lots of 1-24 | 25-99 | 100-999 |
|---|---|---|---|---|
| H2001-1 | −55° C to +125° C | $20.60 | $16.50 | $13.40 |
| H2001-9 | 0° C to +70° C | 10.30 | 8.25 | 6.67 |

### DTμL HIGH POWER DRIVER

High current capability: Up to 150 mA. High voltage capability: 40 volts $LV_{CEO}$. Specify 10-lead TO-100 or ¼" x ¼" Flat Pak; 10-lead plastic Dual In-Line also available; price on request.

| | | | | |
|---|---|---|---|---|
| H2002-1 | −55° C to +125° C | $16.30 | $13.04 | $10.92 |
| H2002-9 | 0° C to +70° C | 7.90 | 6.32 | 5.27 |

| H2204-1 | −55° C to +125° C | $68.00 | $54.00 | $48.00 |
| H2204-9 | 0° C to +70° C | 32.00 | 26.00 | 22.00 |

### SPDT ANALOG SWITCH

Low feed-through spikes on output. $t_{on}=120$ nsec typical. In 10-lead TO-100 package.

| | | | | |
|---|---|---|---|---|
| H3002-1 | −55° C to +125° C | $28.30 | $22.60 | $18.96 |
| H3002-9 | 0° C to +70° C | 20.60 | 16.50 | 13.80 |

### PNP QUAD CORE DRIVER

High voltage: Up to 50 volts $LV_{CEO}$. High current: Up to 1.0 amp. Fast switching: $t_{on}=25$ nsec typ.; $t_{off}=65$ nsec typ. In 14-lead ¼" x ¼" Flat Pak.

| Fairchild Type | Operating Temperature | Net Each, Lots of 1-24 | 25-99 | 100-999 |

| H6400-9 | 0° C to +70° C | 21.00 | 21.00 | 14.00 |

### NPN QUAD CORE DRIVER

High voltage: Up to 50 volts $LV_{CEO}$. High current: Up to 1.0 amp. Fast switching: $t_{on}=25$ nsec typ.; $t_{off}=45$ nsec typ. In 14-lead ¼" x ¼" Flat Pak; 14-lead plastic Dual In-Line also available; price on request.

| | | | | |
|---|---|---|---|---|
| H6501-1 | −55° C to +125° C | $21.00 | $21.00 | $14.00 |
| H6501-9 | 0° C to +70° C | 14.00 | 14.00 | 9.50 |

### 4-BIT ARITHMETIC LOGIC UNIT

Eight MSI chips in one 30-pin 1" x 1" Flat Pak. High speed operation; fully buffered complementary outputs.

| Fairchild Type | Operating Temperature | Net Each, Lots of 1-24 | 25-99 | 100-999 |
|---|---|---|---|---|
| H8081-1 | −55° C to +125° C | $215.00 | $173.00 | $140.00 |
| H8081-9 | 0° C to +70° C | 140.00 | 112.00 | 92.00 |

**The following hybrid circuits are also available.** In 1" x 1" Flat Pak (flat metal lid). Temperature Range: 0° C to +70° C. Also available in −55° C to +125° C temperature range, prices on request.

## MOS INTEGRATED CIRCUITS

Fairchild MOS integrated circuits utilize either Metal Gate or Silicon Gate technology. The benefits of these technologies combined with the extensive usage of computer-aided design, have resulted in a group of highly complex and sophisticated products. Suffix (A6J310014X) indicates operating temperature: **19**, 0° C to +70° C; **14**, −55° C to +85° C.

### OPERATIONAL AMPLIFIERS

Complete family of operational amplifiers including the μA741 internally-compensated type and its dual version, μA747; μA715 high-speed operational amplifier; μA725 instrumentation amplifier; μA740 FET-input amplifier and μA776 programmable operational amplifier. All devices are monolithically constructed using the Fairchild Planar Epitaxial Process.

## SILICON-GATE MOS TECHNOLOGY

All of the MOS products listed below use Intel's silicon-gate processing technology. The process differs from conventional aluminum gate MOS in that the gate is a self-aligned silicon structure, buried under an insulator. This construction provides several important advantages over conventional MOS: Higher frequency performance due to reduced parasitic capacitances; higher functional density due to inherently smaller device geometries; higher yields for a given functional complexity due to increased density; compatibility with standard IC logic forms due to lower threshold voltages; higher reliability due to complete dielectric isolation of the sensitive gate structure and more tolerance to various package environments due to the protection provided by the oxide surrounding the gate. Plastic packages may be used.

### RANDOM ACCESS MEMORIES

**1101A, 1101A1**—$T_{CASE}=0°$ C to $+85°$ C. Access time below 750 ns typ.; 1.5 μs max. Low power dissipation of less than 1.5 mW/bit during access. DTL and TTL compatible; OR-tie capability. Inputs protected against static charge.

**1103**—$T_A=0°$ C to $+70°$ C. Access time, 300 ns; cycle time, 500 ns. Power consumption, 240 μW/bit selected, 6 μW/bit standby. Prefix **C**, ceramic package; prefix **P**, plastic package. TO-99 metal can has 8 leads except 1405A, 10 leads.

## SCHOTTKY BIPOLAR TECHNOLOGY

All the bipolar products listed below are built using Intel's Schottky process. Schottky diodes are formed at the interface between a metal (aluminum) and a semiconductor (silicon). Major difference between an ordinary diode and a Schottky diode is that no charge may be stored by a Schottky rectifying junction. Current is carried by electrons flowing from the silicon to the metal. These electrons quickly reach equilibrium with other metal electrons, effectively preventing any charge storage. Several advantages result from the use of Schottky processing when compared with standard or gold-doped bipolar processing: Higher speed—3 to 5 times faster; lower power; higher functional density and higher yields.

### RANDOM ACCESS MEMORIES

**3101, 3101A**—$T_{CASE}=0°$ C to $+85°$ C. Access time=60 nsec (3101); 35 nsec (3101A). Power=8 mW/bit. TTL-DTL compatible; OR-tie capability; open collector outputs. Minimum external components—fully decoded with on-chip address decode and buffer. Simple memory expansion—chip-select input lead. Minimum line reflection—low voltage diode input clamp.

**3102**—$T_{CASE}=0°$ C to $+85°$ C. Access time, 50 nsec typ. Power, 2.5 mW/bit. TTL-DTL compatible; OR-tie capability—open collector output. Simple memory expansion with decoder-driver (3202). Low input load current of 0.25 A maximum.

Prefix **C**, ceramic package; prefix **P**, plastic package.

### OTHER CIRCUITS

**3104**—$T_{CASE}=0°$ C to $+85°$ C. Speed=30 nsec search to output delay. TTL-DTL compatible. Separate bit enable. Simplifies system design. OR-tie capability—open collector outputs. High fan in of 0.25 mA load current.

**3202**—$T_{CASE}=0°$ C to $+85°$ C. Fast address to output time—25 nsec max. TTL-DTL compatible. Easy memory expansion with 4 chip-select inputs. Low system power consumption—3 of 6 code.

**3205**—$T_{CASE}=0°$ C to $+85°$ C. Easy memory expansion—3 enable inputs. Fast—18 nsec max. delay. TTL-DTL compatible. Low input load currents—0.25 mA max. High fan out of 10 mA min. sink current.

**3404**—$T_{CASE}=0°$ C to $+85°$ C. High speed—12 nsec max. input to output delay. Easy to use, independent 4-bit and 2-bit latches. High fan out of 10 mA min. output sink current. High fan in of 0.375 mA max. input load current. TTL-DTL compatible. Latches may be used as very high-speed inverters by applying a continuous "low" at the "write" inputs.

## LINEAR INTEGRATED CIRCUITS

Operating Temperature Range: −55° C to +125° C (suffix **-1**); 0° C to +70° C (suffix **-5**). Package: Flat pack (suffix **B**); metal can (suffix **C**) and DIP (suffix **D**).

**MIC709 High Performance Amplifier**—$P_D = 50$ mW; differential input voltage = ±5 V; output resistance = 150 ohms; input resistance = 4000 ohms; output voltage swing = ±11 V; input-offset voltage = 2 V; input-offset current = 50 nA; input bias current = 200 nA; input voltage = ±10 V. CMRR = 86 dB.

**MIC710 High-Speed Differential Comparator**—$P_D = 300$ mW; differential voltage = ±5 V; output resistance = 200 ohms; peak output current = 10 mA; supply voltage = +14.0 V, −7.0 V; input-offset voltage = 0.6 V; input-offset current = 0.75 μA; input bias current = 13 μA; input voltage = ±7 V. CMRR = 100 dB.

**MIC711 Dual Comparator**—$P_D = 300$ mW; differential input voltage = ±5 V; peak output current = 50 mA; supply voltage = +14.0 V, −7.0 V; strobe voltage = 0 to +6.0 V; power consumption = 130 mW; input-offset voltage = 1.0 V; input-offset current = 0.5 μA; input bias current = 25 μA; input voltage = ±7 V. Response time = 40 ns; strobe release time = 12 ns.

**MIC720 Dual High-Speed Differential Comparator**—$P_D = 300$ mW; differential input voltage = ±5.0 V; output resistance = 200 ohms; supply voltage = +14.0 V, −7.0 V; output sink current = 2.5 mA typ.; input-offset voltage = 2.0 mV (MIC720-1), 5.0 mV (MIC720-5); input-offset current = 3.0 μA (MIC720-1), 5.0 μA (MIC720-5); input bias current = 20 μA (MIC720-1), 25 μA (MIC720-5); input voltage = ±7.0 V. CMRR = 100 dB typical. (MIC720-1), 98 dB typical (MIC720-5).

**MIC723 Precision Voltage Regulator**—$P_D = 800$ mW (metal can), 900 mW (DIP): input-output differential voltage = 40 V; current from $V_Z = 25$ mA; current from $V_{REF} = 15$ mA; output noise voltage = 20 $\mu V_{rms}$; line regulation ±0.1% $V_{OUT}$; load regulation = 0.15% $V_{OUT}$ (MIC723-1), 0.2% $V_{OUT}$ (MIC723-5). Ripple rejection = 74 dB at f = 50 Hz to 10 kHz.

**MIC726 Temperature-Controlled Differential Pair**—Maximum Ratings Each Transistor: Collector-to-substrate voltage = 40 V; $BV_{CBO} = 40$ V; $LV_{CEO} = 30$ V at $I_C = 1$ mA; $BV_{EBO} = 5$ V; $I_C = 5$ mA. Input-offset voltage = 2.5 mV (MIC726-1), 3.0 mV (MIC726-5); input-offset current = 10 nA typ.; average input bias current = 250 nA typ. Supply voltage rejection ratio = 25 μV/V.

**MIC730 Differential Amplifier**—$P_D = 300$ mW; differential input voltage = ±15 V; supply voltage = 15 V; output resistance = 600 ohms; input resistance = 20K ohms typ. (MIC730-1), 15K ohms typ. (MIC730-5); output voltage swing = 8.0 $V_{pp}$; input-offset voltage = 2.5 mV (MIC730-1), 5.0 mV (MIC730-5); input-offset current = 1.5 μA (MIC730-1), 3.0 μA (MIC730-5); input bias current = 7.5 μA (MIC730-1), 16.0 μA (MIC730-5). CMRR = 85 dB typ. (MIC730-1), 80 dB typ. (MIC730-5).

**MIC741 High Performance Amplifier**—$P_D = 500$ mW; differential input voltage = ±30 V; input resistance = 1.0 meg typ.; output voltage swing = ±14 V; input-offset voltage = 5.0 mV (MIC741-1), 6.0 mV (MIC741-5); input-offset current = 200 nA; input bias current = 500 nA; input voltage = ±15 V. CMRR = 90 dB typical.

## DIGITAL-TO-ANALOG CONVERTERS

Wide selection of 6, 8, 10 and 12 bit D-to-A converters available with or without internal references and operational amplifiers. The 6, 8 and 10 bit converters require ±15 V and +5 V supplies. The 6 and 8 bit converters consume 400 mW max.; 10 and 12 bit consume 500 mW. All units are TTL-DTL compatible and provide a linearity of ±½ LSB. Temperature Range: 0° C to +70° C, no suffix (MN301); −55° C to +125° C, suffix **H** (MN301**H**).

## LADDER NETWORKS
### FOR OPERATION WITH INTERSIL QUAD SWITCHES ICL8018, ICL8019 AND ICL8020 FOR 12 BIT D-TO-A

MN142 provides three sets of R-2R-4R-8R resistors plus an 8R reference resistor. MN143 provides the necessary feedback, scaling and bias resistors. Operating Temperature: 0° C to +70° C (suffix CX); −55° C to +125° C (suffix MX).

## MTTL I™ MC400 AND MC500 SERIES

Family of transistor-transistor logic designed for general purpose digital applications. Features medium operating speed (20 MHz clock rate), good external noise immunity, high fan-out and capability of driving lines up to 600 pF capacitance. Temperature 0° C to +75° C (MC400 Series), −55° C to +125° C (MC500 Series). $V_{CC}$ = 5.0 V; $T_A$ = 25° C. In Case 607 flat ceramic package (suffix **F**), Case 632 dual in-line ceramic package (suffix **L**) or Case 605 dual in-line plastic package (suffix **P**). Other types available; data on request.

## MTTL III™ MC3000 SERIES AND MC3100 SERIES

Designed for general purpose digital applications. High operating speed (30–50 MHz clock rate), good external noise immunity, high fan-out and capability of driving lines up to 600 pF capacitance. Temperature range 0° C to +75° C (MC3000 Series), −55° C to +125° C (MC3100 Series). In flat ceramic package, suffix **F** (Case 607) and dual in-line ceramic package, suffix **L** (Case 632). Series MC3000 also available in dual in-line plastic package.

## MTTL™ COMPLEX FUNCTIONS

Designed for digital applications in the medium to high-speed range. Provide significant reduction in package count and increased logic per function over devices in the basic MTTL and MDTL™ families. Temperature, 0° C to +75° C. $V_{CC}$ = 5.0 V; $T_A$ = 25° C. **F** suffix denotes ceramic flat package, **L** suffix denotes ceramic dual in-line package and **P** suffix denotes plastic dual in-line package.

## DIGITAL LOW POWER mW MRTL MC908, MC808 AND MC708 SERIES (CASE 601)

MC908 Series −55° C to +125° C; MC808 Series 0° C to +75° C; MC708 Series +15° C to +55° C. $P_D$ ratings at inputs high/inputs low except as otherwise noted. MC708 Series can be mixed with devices from the medium-power MC700 Series which has loading factors normalized for compatibility. $V_{CC}$=3.0 volts ±10% for MC908 Series; 3.6 volts ±10% for MC808 and MC708 Series. $T_A$=25° C. Plastic packaged devices are available in the MC708/MC808 Series only. Ceramic flat packages also available on request.

## DUAL STEREO PREAMPLIFIER (CASE 632)

**Motorola Type MC1303L**—Temp. 0° to +75° C. Input offset voltage, 1.5 mV; open loop voltage gain, 10 kV; output voltage swing, 5.5 V rms; channel separation, 70 dB. Net Each, Lots of 1–99.....**$2.20**; 100–999.....**$1.75**; 1000–4999.....**$1.60**

## FM MULTIPLEX STEREO DEMODULATOR (CASE 605)

Built-in stereo indicator lamp driver. Temp. 0° to +75° C. Power required, 8–14 VDC; lamp current, 40 mADC; $P_D$, 625 mW.
**Motorola Type MC1304P**—Net Each, Lots of 1–99......**$4.05**
100–999.............**$3.25**; 1000–4999.............. **2.90**

## DIFFERENTIAL VIDEO AMPLIFIER

Temperature: MC1733C, 0° to +75° C; MC1733, −55° to +125° C. Suffix **G** denotes case 603 metal package and suffix **L** denotes case 632 ceramic package.

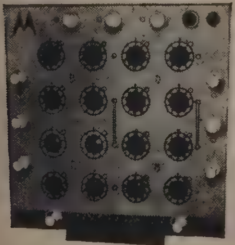
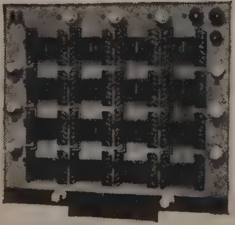
## INTEGRATED CIRCUIT BREADBOARDS



**XC63**



**XC72**

**XC73**

Complete breadboarding flexibility with "plug in-plug out" changes possible. With 3 supply voltages at each socket, double pin jacks, 22-pin PC edge connector or 11 BNC coaxial connectors input/output arrangement, plus banana plug for power connection between boards. Designed using 1/16″ glass epoxy with 2 oz. gold plated printed circuit runs. Operating Temperature Range: −65° C to +150° C. Rated for DC to 50 MHz frequency.

# RCA DIGITAL INTEGRATED CIRCUITS

## COS/MOS INTEGRATED CIRCUITS

**CD4000A Series** digital IC's operating temperature range −55° C to +125° C except types in plastic package, −40° C to +85° C. Noise immunity = 4.5 V typ. Threshold voltage = 1.5 V typ. N-channel; −1.5 V typ. P-channel. Recommended operating voltage range of 3 V to 15 V. DC supply voltage −0.5 V to +15 V. Available in four types of packages: Suffix **D**, ceramic dual inline; suffix **E**, plastic dual inline; suffix **K**, flat pack; suffix **T**, TO-5 style.

**CD4000 Series,** same as CD4000A series except 5 V to 15 V. In flat pack except suffix **D**, ceramic dual inline; suffix **T**, TO-5 style.

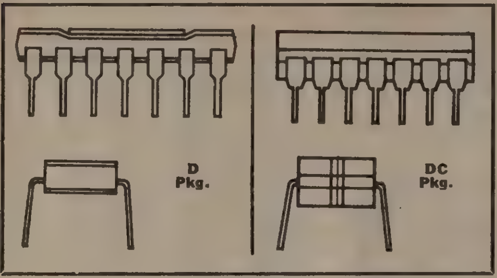
## DIGITAL TTL INTEGRATED CIRCUITS

ECCSL (Emitter-Coupled Current Steered Logic) and BCD-to-7 segment decoder drivers also available. Specifications and prices available on request.

**RCA IC'S STOCKED AT GAITHERSBURG, MD; ORLANDO & HOLLYWOOD, FL; HUNTSVILLE, AL; WINSTON-SALEM & RALEIGH, NC; AND ATLANTA, GA**

# RAYTHEON Integrated Circuits



### TTL SERIES

Operating temperature −55° C to +125° C (**0, 1** final digit) and 0° C to +75° C (**2, 3** final digit). Even numbers (RF30, RF32) high fanout versions; odd numbers (RF31, RF33) standard fanout versions.

### RAY I AND RAY II SERIES

In hermetic glass-kovar 14-lead DIP; available in 14-lead ¼″ x 3⁄16″ flat pkg. at same price, add suffix **K** (RF30**K**). Also available in ceramic 14-lead DIP (Cerdip). Prices on request.

## BEAM LEAD INTEGRATED CIRCUITS

Beam Lead system is a packaging technique which totally eliminates wire bonding along with the cost and reliability problems associated with wire bonding. Leads are an integral part of the chip. Data sheets available on request.

# Siliconix incorporated ANALOG SWITCHING CIRCUITS

Siliconix integrated circuit part numbers include letter prefix which denotes function and letter suffixes denote temperature range and package style. Function Letter Prefix: **D**, driver for FET switch; **DG**, **DGM**, drivers with FET switches; **G**, multiple FET switch; **SI**, second source item. First Letter Suffix: **A**, −55° C to +125° C military service; **B**, −20° C to +85° C industrial service; **C**, 0° C to +70° C industrial service; **D**, −55° C to +85° C industrial service. Final Letter Suffix: **A**, round TO-5; **F**, TO-84, TO-89 Flatpac; **K**, TO-116 ceramic DIP; **L**, TO-86 Flatpac; **P**, metal-ceramic TO-116 DIP; **R**, 24-32 lead DIP.

### NEW CMOS PRODUCTS

Integrated circuits employing complementary MOS (CMOS) technology incorporate both N- and P-channel devices on a common substrate. Advantages of CMOS over conventional MOS circuits include near-zero quiescent power dissipation and nearly-constant analog switch ON resistance.

**G1500AA/DA Switch**—CMOS analog switch with near-constant ON resistance. An inverter is included to provide opposite polarity control signals to parallel N- and P-channel switches. Zener diode clamp protection on all inputs. Switching time of 50–80 ns.

**DM110 Digital Multiplexer**—A 16-channel digital multiplexer featuring a "floating" output when the package is inhibited so that multiple outputs may be connected to build digital multiplexers for as many channels as desired. Chip contains protection and pull-up circuits for decode and enable inputs, four-line binary to 1-out-of-16 decode logic, 75 V over-voltage protection for data inputs and an inverter buffer.

### NEW CMOS PRODUCTS (CONT'D)

**DG506A/B Analog Multiplexer**—Monolithic circuit which includes 16 CMOS switches on a common substrate, binary decode (with enable) and driver for each channel and +5 volt pull-ups for TTL compatibility.

**Data Sheets and Pricing Available on Request.**

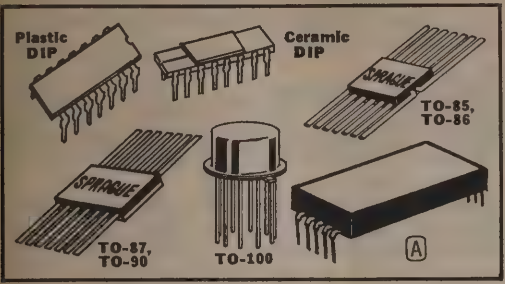
# SPRAGUE UNICIRCUIT® INTEGRATED CIRCUITS



## COMPLEX-FUNCTION CIRCUITS—TTL

Diode clamping on all inputs prevents "line ringing" problems. Compatible with Series 54/74. Operating temperature −55° C to +125° C (US5400, **USS** prefix); 0° C to +70° C (US7400, **USN** prefix). In plastic dual inline package. Available in hermetic metal bottom flat-pack (**J**) and −55° C to +125° C temperature range. Prices on request.

## MOSTEK MOS INTEGRATED CIRCUITS

Incorporates ion implantation processing step by which standard P-channel, enhancement-mode MOS devices are made to be compatible with TTL/DTL logic levels. Accomplished by doping the silicon wafer with ions of the proper dopant, such as phosphorus or boron. These ions are accelerated to a high energy level, 40,000 to 300,000 electron volts, and bombard the wafer. The ion penetration depth is determined by their energy. An aluminum mask or a thick oxide (12,000 Angstrom) is sufficient for masking areas where implantation is not desired. Ion implantation in the channel or gate region (thin oxide area) reduces the threshold or turn on voltage requirements. This controlled process allows the threshold to be set at a desired level so that five volt logic swings will turn the transistors on-and-off and still maintain good noise margins. Each of these products interfaces directly, at all inputs and outputs, to TTL or DTL without the use of external resistors or other interface components. All MOSTEK ROM's can be custom programmed to individual customer specifications by coding a single mask used during processing. Please inquire about coding sheets available. Package: Suffix **L**, TO-100; suffix **P**, ceramic DIP.

## MOS/LSI INTEGRATED CIRCUITS

Many types of equipment previously not suitable for electronic control can now take full advantage of the latest electronics technology. Equipment costs can be kept low and equipment size can be reduced easily. MOS (Metal Oxide Semiconductor) circuits are ideal for digital applications including timers and counters, data transmission and switching equipment, recorders, calculators, controls and computer equipment. MOS is also suitable for analog applications such as telemetry and test equipment. The basic MOS device combines the best attributes of the pentode vacuum tube with all the advantages of the transistor. Have high-input impedance; small, simple to fabricate and consume little power.

Inherent advantages of MOS/LSI include: Increased circuit complexity per package; lower cost per circuit function; fewer subsystems to test; fewer parts to assemble and inspect; lower power drain per function and a choice of standard or custom products. The most significant feature is the large number of semiconductor circuit elements that can be put on a small chip. This high circuit density means large-scale integration—up to 5,000 devices on a silicon chip only 150 x 150 mils square. Each transistor in the MOS/LSI array requires as little as 1 square mil of chip area—a great reduction over the bipolar transistors requiring 49 to 50 square mils.

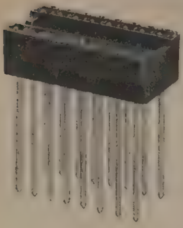
# Texas Instruments INTEGRATED CIRCUIT HARDWARE



A

## WIRE-WRAP TYPE INTEGRATED CIRCUIT SOCKETS (FIG. A)

Low-profile sockets for low cost, reliable high-density production packaging of dual-in-line integrated circuits. Replaceable contacts, Wire-Wrap pins. **Contact Material:** 30 microinches minimum gold, over 50 microinches minimum nickel plating, over phosphor bronze spring contacts. **Terminals:** .025″ x .025″ Wire-Wrap pins. **Body Material:** Glass-filled nylon. **Operating Temperature:** −65° C to +150° C.

E

## SOLDER CUP DUAL-IN-LINE CONNECTORS (FIG. E)

Pugs into all standard dual-in-line sockets, providing simple system testing or panel-to-panel interconnection. Solder cups for easy soldering of cable to connector. **Contact Material:** Gold plated brass, with solder cups. **Body Material:** Glass-filled nylon. **Operating Temperature:** −65° C to +150° C.

F

## MECH PAK CONNECTOR (FIG. F)

Specially designed for use with ¼″ x ⅛″ 14-lead flat pack integrated circuits mounted in Texas Instruments Mech Pak Carrier. Ideal for testing and prototype work. **Contact Material:** Gold-plated beryllium copper. **Body Material:** Glass-filled diallyl phthalate. **Operating Temperature:** −65° C to +150° C.

| Texas Instruments Type | Overall Size, with IC in Place Lgth. | Overall Size, with IC in Place Width | Overall Size, with IC in Place Height | Net Each, Lots of 1-99 | 100-999 | 1000-4999 |

G

## DISCRETE COMPONENT PLATFORM (FIG. G)

Provides dual-in-line plug-in flexibility for discrete components (resistors, capacitors, etc.). The discrete components connect easily to platform, which can be plugged directly into IC panel system. **Contact Material:** Gold over nickel plating, over phosphor bronze contacts. **Body Material:** Glass-filled phenolic. **Operating Temperature:** −65° C to +150° C.

## NPN SILICON PLANAR EPITAXIAL DARLINGTON PHOTOTRANSISTORS

Same as above except this series is characterized for controlled, high sensitivity at very low irradiance levels. The flat window eliminates the need for critical sensor positioning in applications with low irradiance; lensed window reduces optical cross-talk from stray light.

## SILICON PLANAR EPITAXIAL PHOTOTRANSISTORS

Silicon phototransistors in miniature hermetic package designed for high-density mounting applications in card and tape readers, pattern and character recognition equipment, encoders and associated designs requiring stable characteristics. CLT3020, CLT3030, CLT4020 and CLT4030 types are characterized by a wide acceptance angle, fast switching and narrow tolerance ranges of sensitivity. Flat window minimizes the need for critical sensor positioning in many applications. CLT3160, CLT3170, CLT4160 and CLT4170 types are characterized by a narrow acceptance angle, fast switching and narrow tolerance ranges of sensitivity. Lensed window reduces optical cross-talk from stray light present in many applications.

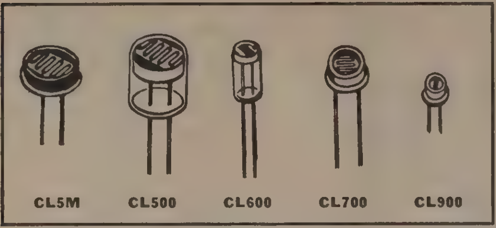
# CLAIREX® Photoconductor Cells



Variable resistors controlled by light for automation and control applications. Five series in both metal and glass packages meet most design requirements. Available in low resistance "L" types for transistor and other low voltage uses. Feature stable and closely controlled parameters. High ratio of light-to-dark current at low light levels. High sensitivity and fast response of cadmium selenide. **Operating Temperature:** −50° C to +75° C. **Size:** CL5M series, .490″ dia. x .183″ h.; CL500 series, .500″ dia. x ½″ lg.; CL600 series, .250″ dia. x ½″ lg.; CL700 series, TO-5 case .360″ dia. x .180″ h.; CL900 series, TO-18 case .210″ dia. x .150″ h.

## DESIGNERS' KIT

Recommended for all prototype design applications. Contains five different photoconductive cells: CL505, CL603A, CL704L, CL707 and CL902; plus designers data sheet and listing of all standard Clairex types.
**Clairex Designers' Kit**—Net Each....................**$10.00**

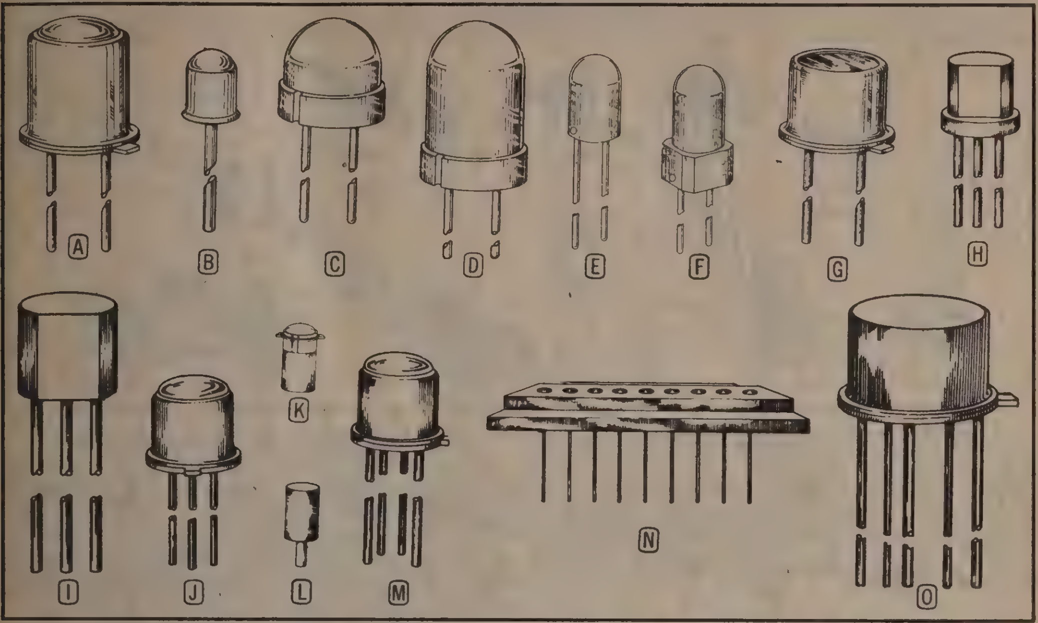
SOLID STATE

# OPTOELECTRONICS



## SOLID STATE LAMPS (LIGHT-EMITTING DIODES)

Withstand severe shock and vibration. Compatible with most optoelectronic detectors. Ideal for use in alarm, detection, switching and similar circuits. Visible output lamps SSL-3, -22, -22L, -12 and -212 are high efficiency gallium phosphide (GaP) and emit red light; all others are gallium arsenide (GaAs) infrared output lamps that are an excellent match for the spectral response of silicon detectors. Visible output lamps, plastic encapsulated; infrared types, hermetically sealed. All infrared lamps in Case A (**Fig. A**) are also available at the same price in Case G (**Fig. G**), which has a flat window.

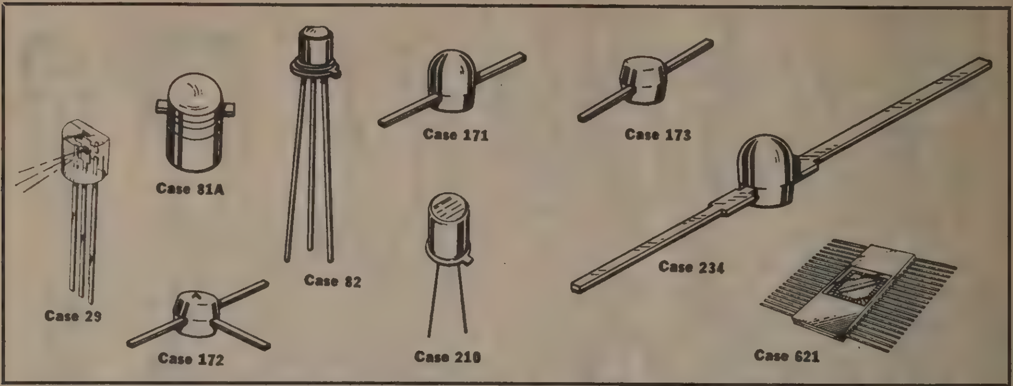
# MOTOROLA Semiconductors OPTOELECTRONIC DEVICES



Optoelectronic devices are designed for use in computer, industrial and consumer equipment. Standard line of optoelectronic products include light emitters, light detectors and monolithic phototransistor and photodiode arrays. Also available are custom phototransistor and light emitting diode arrays using discrete devices mounted on printed circuit boards and custom monolithic arrays of photodiodes and phototransistors. Compactness, reliability and compatibility with integrated circuits keynote light emitting diode advantages as well as perfect spectral matching of infrared units to silicon detectors. They emit infrared or visible light when forward biased, fast switching types for flexibility in package, performance and price.

## LIGHT EMITTING DIODES

Visible red (6600 Angstrom typ. peak emission wavelength) gallium arsenide phosphide emitters for use in panel and circuit indicators, light modulators, alphanumeric displays and film annotation.

## INFRARED EMITTING DIODES

Infrared (9000 Angstrom typ. peak emission wavelength) gallium arsenide emitters provide high power output in light modulators, shaft or position encoders, punched card and tape readers, optical switching and logic circuits. They are spectrally matched for use with silicon detectors.

## MONOLITHIC ARRAYS

Standard monolithic linear photodiode and phototransistor arrays are on 0.005″ center-to-center spacing. The active area is 0.005″ by 0.0045″ with 0.0005″ space between elements. Used extensively in optical character recognition applications, available to meet specific custom requirements with regard to spacing, active area, number of elements, etc. Ideal for OCR applications requiring very high density spacing, exceptional alignment and high optical resolution.

## NPN SILICON PHOTOTRANSISTORS

Control light generated current flow with 21 different PIN phototransistors and photo Darlington's for optimized optical performance in DC to high frequency designs. Sensitive, fast and rugged detectors are also available in custom arrays of discrete devices preassembled and pre-tested to specifications. Phototransistors are high quality passivated annular devices providing a high order of stability and reliability. Sensitive throughout the visible and near infra-red spectral range with peak sensitivity typically at a wavelength of 0.8 micrometers. Much faster than the conventional photocells or mechanical contacts, these phototransistors have rise and fall times in low microseconds when pulsed with gallium arsenide light emitting diode.

### HIGH DENSITY PHOTOTRANSISTORS

Subminiature NPN silicon phototransistors designed for use in card and tape readers, pattern and character recognition equipment, shaft encoders or any design requiring radiation sensitivity, stable characteristics and high stability. Switching time 6.5 μsec max. Sensitivity and light current at H = 5.0 mW/cm²; dark current at H = 0. H is radiation flux density emitted from a tungsten source at 2870 K.

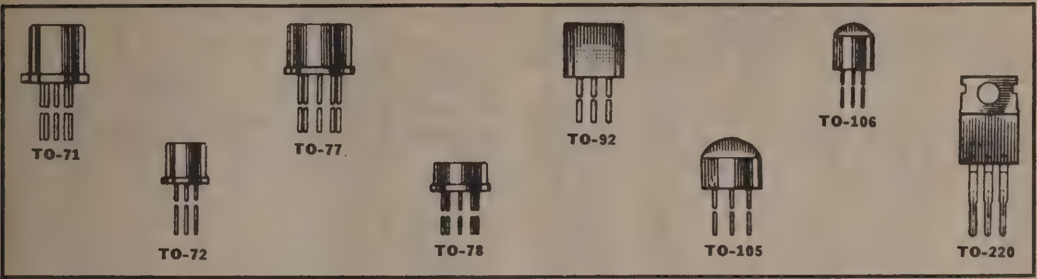
# NPN AND PNP SILICON PLANAR TRANSISTORS



## SILICON LF POWER TRANSISTORS

The following tables list a standard line of low frequency silicon power transistors available from Fairchild. Devices are listed by package, polarity, voltage and current. Devices are available with voltage ranges from 40 volts to 350 volts; current ranges from 1 amp to 30 amps and frequencies of 1 MHz to 80 MHz.

## REFERENCE AMPLIFIERS (TO-12)

Designed for applications in power supplies where they can serve the dual function of a voltage reference element and an error voltage amplifier. Integrated devices comprised of zener diode and NPN transistor in a single pellet. Cancellation of temperature coefficients between the zener diode and transistor result in a transfer characteristic having a very low net TC. Circuit Characteristics: $V_{CB}=3$ V, $I_C=0.5$ mA (RA3 Series, 0.1 mA), $I_Z=0$ (RA3 Series, 5 mA), $R_B=1$ K. For further information see PIB 35.35.

## STANDARD TRIAC CIRCUIT ASSEMBLIES

Components are mounted on a printed circuit board and equipped with an extruded aluminum heatsink. All current carrying components electrically isolated from heatsink. Applications include resistance heat control, shaded pole or permanent-split capacitor type motor speed control, series universal type motor speed control, incandescent lamp dimming, etc.

$V_{rms}=120$ V (suffix 1, 3, 5); 240 V (suffix 2, 4, 6).

## SOLID STATE AC POWER CONTROLLERS

Zero voltage switching provides low RFI levels. All solid state control, including monolithic integrated firing circuit, for long life and high reliability. High input impedance allows use of sensors operating at any point from 5K to 100K ohms.

*Resistive load of at least 4.2 amps rms rating be connected at all times. Inductive loads cannot be controlled with these modules. †Voltage developed between $S_1$ and $S_2$. Sensor resistance has one side common with AC line ($S_1$ is common with $L_1$).

## SOLID STATE PHASE CONTROL POWER MODULE

Capable of operating with variable resistance sensors (thermistors, photoresistors, humidity sensitive resistors, etc.) as well as DC tachometer signals. Consists of a monolithic integrated control circuit and a triac power switching semiconductor device with all additional parts needed to afford full AC phase control of resistive or induction motor loads. RFI suppression network included to minimize conducted and radiated RFI. User need only provide a variable resistance sensor and a reference control resistor. Control can be made responsive to variations in temperature, light level, humidity or other physical parameters. With extruded aluminum heatsink, electrically isolated from all current carrying components. Detailed information on actual mode of operation available on request. Values given are maximum except as otherwise noted.

## SOLID STATE FAN MOTOR SPEED CONTROL

The S400 line of speed controls consists of an AC power semiconductor (SC141B triac) and all necessary control circuitry and heatsinking to afford manual speed control of fan motors of the permanent split capacitor and shaded pole types. All devices mounted on a PC board and are designed for direct mounting by means of the potentiometer bushing provided. Rated at 5.0 amps, 120 V rms. Feature UL Recognized line switch; min. output voltage set point potentiometer; PC board 1/16" XXXP material UL Recognized; copper heatsink for proper cooling of triac.

**GE Types S400A1S and S400A1SC**—Incorporate radio frequency interference suppression.

**GE Type S400A1SC**—Line voltage compensation automatically compensates for variations in line voltage.

## TYPE D13V

## INTEGRATED VOLTAGE REGULATOR (IVR)

The IVR consists of two NPN transistors, a zener diode and a resistor on a monolithic chip mounted in a TO-98 three-lead plastic package. It is designed for use as a shunt voltage regulating element and reference amplifier with simple resistor programming. Characteristics: Regulated Voltage Range: 10 volts min.; 40 volts max. TC of Regulated Voltage: 0.3%/°C typ.; 0.1%/°C max. Thevenin Impedance: 10 ohms typ.; 50 ohms max. Thevenin Reference Voltage: 8.5 volts typ.; 10 volts max. Total Average Power: 400 mW.

TO-98 plastic packaged devices engineered to deliver excellent performance with maximum value. NPN construction except as otherwise noted. All TO-98 devices can be supplied with leads formed to fit either a TO-5 or TO-18 socket; prices on request.

## SEMICONDUCTOR CHIPS

Transistor and diode chips suitable for custom circuitry. Feature gold backing of 3000Å, minimum thickness, for transistor collector contact and diode cathode contact. Aluminum metalization for transistor emitter and base contacts and diode anode contact. Maximum conditions for mounting chips—425° C for a maximum of five minutes in an inert atmosphere. Chips are shipped in glass vials sealed with a nitrogen back-fill. This standard offering features optimum chip protection. Also available in "Tray Packs" in quantities of 100, 400 or 1,000.

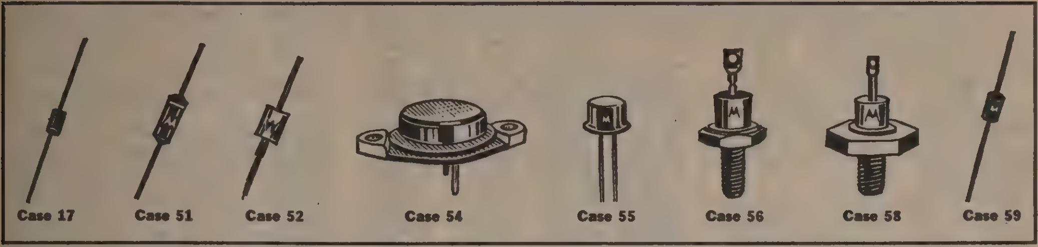
# MOTOROLA Semiconductors SILICON ZENER DIODES



Extensive line of zener diodes covers a complete range of power categories (150 mW to 50 W) and voltages (2.4 V to 200 V). Diodes are 100% tested for conformity to 4 different specified characteristics. Impedance is derived from the 60 Hz AC voltage which results when an AC current having an rms value equal to 10% of the DC zener current is superimposed upon the DC current. Standard voltage tolerances of ±5%, ±10% and ±20%; non-standard devices available to meet virtually any zener diode requirement. All MIL types approved to supply TX devices.

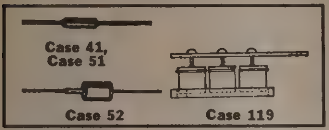
# MOTOROLA Semiconductors SILICON REFERENCE DIODES



Extremely stable voltage reference sources. Diffused junction units combine smallest size with tight stability. For high reliability requirements, Meg-A-Life II$^{\text{TM}}$ units are available in same types as noted for MIL-S-19500/ spec types.

### DIFFUSED BASE (CASE 11)

Diffused base transistors in TO-3 (Case 11) feature graded-base profile for low emitter-base resistance and high-temperature stability; high breakdown voltage capability; higher frequency response and faster switching speeds. Most types also available in TO-41 (Case 4) on request. MP600–MP603, MP2000A–MP2400A, 2N2288–2N2293 and 2N5435–2N5440 alloy diffused epitaxial process.

## SILICON POWER TRANSISTORS

### COMPLEMENTARY TRANSISTORS

This list represents the large number of "off-the-shelf" complementary silicon power transistors available. For convenience in choosing complements, a selection can be made on the basis of maximum collector current, case, and voltage. Ic ratings are maximum.

## NPN-PNP MICRO-T PLASTIC TRANSISTORS (CASE 28)

Micro-T package 0.085″ dia. injection-molded plastic package for applications requiring high component mounting density. Also useful in hybrid circuits—easier to mount without special equipment and operator training. More detailed information available on request.

## GERMANIUM DIODE

**RCA Type 1N2326**—$V_{RRM}$ = −1 V max.; $I_O$ = 0.8 A max. at $T_A$ = 85° C.

## SILICON PLUG-IN RECTIFIERS

| RCA Type | Pkg. | Feature | Replaces Types |
|---|---|---|---|
| CR273/8008 | D | Hermetically sealed; needs no warm-up time | 8008 |

## SILICON POWER HYBRID CIRCUITS

Chips, also known as pellets or dies, represent the electronic portion of the transistor.

## SENSISTOR® SOLID STATE TEMPERATURE SENSING SILICON RESISTORS

- DESIGNED TO MEET OR EXCEED ALL ELECTRICAL REQUIREMENTS OF MIL-T-23648 FOR POSITIVE-TC THERMISTORS
- TG⅛ ELECTRICALLY EQUIVALENT TO RTH42
- TM⅛ ELECTRICALLY EQUIVALENT TO RTH22
- AVERAGE POSITIVE TC OF +0.7%/°C (+7,000 ppm)
- RTH22 MIL-APPROVED 33Ω TO 10K
- RTH42 MIL-APPROVED 10Ω TO 2.7K

### MECHANICAL DATA

TG⅛ resistor encapsulated in hard-glass hermetically sealed package (0.105″ dia. x 0.350″ l.) with welded unborated solder-coated dumet leads. TM⅛ (0.140″ dia. x 0.406″ l.) and TM¼ (0.200″ dia. x 0.585″ l.) resistors encapsulated in molded packages with solder-coated copper leads. A-nickel leads or gold plated A-nickel leads are also available upon request.

### MAXIMUM RATINGS

Power Dissipation at Ambient Temperature: TG⅛ 250 mW at or below 25° C, 125 mW at 100° C (see Figure 1). TM⅛ 125 mW at or below 100° C (see Figure 2). TM¼ 250 mW at or below 100° C. Operating Ambient Temperature Range: −65° C to +150° C. Storage Temperature Range: −65° C to +150° C.

### ELECTRICAL AND THERMAL CHARACTERISTICS

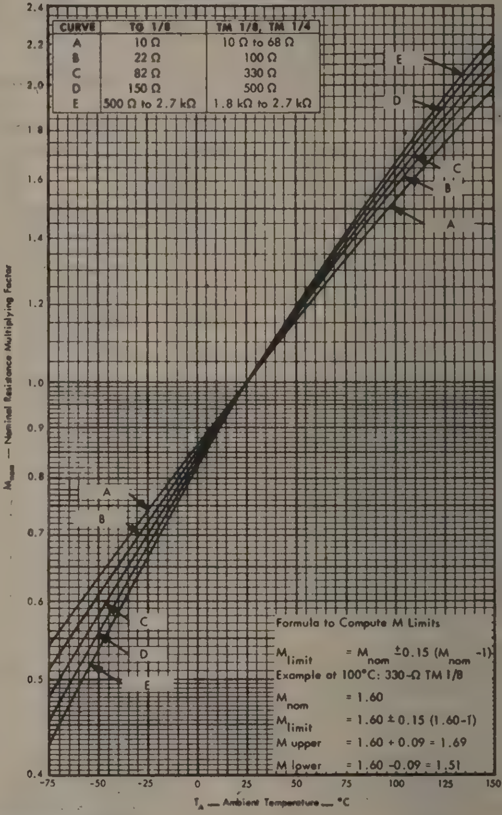
### TYPICAL CHARACTERISTICS

#### NOMINAL RESISTANCE MULTIPLYING FACTOR vs. AMBIENT TEMPERATURE



Formula to Compute M Limits

$M_{limit} = M_{nom} \pm 0.15\,(M_{nom} - 1)$

Example at 100°C: 330-Ω TM 1/8

$M_{nom} = 1.60$

$M_{limit} = 1.60 \pm 0.15\,(1.60 - 1)$

$M\ upper = 1.60 + 0.09 = 1.69$

$M\ lower = 1.60 - 0.09 = 1.51$

### SERIES VC HIGH VOLTAGE POWER RECTIFIERS (FIG. C)

High voltage, high current rectifiers with low leakage current; 1 to 2 amps average DC output. Epoxy encapsulated package. **DC Reverse Current:** Standard, 1 $\mu$A max. at 25° C, 1 mA at 125° C; fast recovery, 2 $\mu$A max. at 25° C, 2 mA at 125° C. **Reverse Recovery:** Fast recovery types, 300 nsec. **Peak 1-Cycle Surge:** 50 amps non-recurrent at 60 Hz; fast recovery types 35 amps. **Insulation Strength:** 10,000 volts. **Oper. Temp.:** −50° C to +125° C. **Size:** 3″ x ¾″ x ¾″.

## SILICON AVALANCHE INTEGRATED FULL WAVE BRIDGE RECTIFIERS (FIG. F)

Electrically insulated welded package offers minimum size and maximum mounting ease. **Average DC Forward Current:** 10 amps at 100° C; (VT Series, 25 amps). **Peak Surge Current:** 100 amps, one-cycle at 60 Hz (VT Series, 250 amps). **Avalanche Power Dissipation:** 600 watts, 100 $\mu$sec square wave (VT Series, 1500 watts); 4 watts continuous. **Max. Reverse Current:** 1.0 mA at 100° C. **Max. Forward Voltage Drop:** 1.2 volts/leg at 100° C and $I_o$. **Insulation Strength:** 2000 VDC minimum. **Operating/Storage Temperature:** −65° to +160° C. **Size:** .752″ dia. x .405″; terminals .395″ long with .070″ dia. holes. Also available with flag terminals. **Mounting:** Press-fit, TO-3 flange or single stud. For lots of 1–99, add **25c** for TO-3; **40c** for stud.

# IC BOARDS AND CARD SYSTEM, RESISTORS

## ERIE INTEGRID® IC BOARDS AND CARD SYSTEM

### INTEGRID CIRCUIT BOARDS

Standard 22-position, double readout boards have edge tabs to fit standard PC edge connectors. Modular design permits use in multiples. Ideal for counters, shift registers, adders and other digital and linear systems. Made of G-10 glass epoxy, 1/16″ thick, 4″ x 4″. Solder-plated circuitry has copper ground plane and gold contacts. Standard .156″ connector spacing. 8-pin and 10-pin units have 12 modules; all others, 8 modules.

### "MIX AND MATCH" INTEGRID CARD SYSTEM

Interchangeable modular elements increase versatility in breadboarding and prototypes. Mix various IC packages and link them with discrete components. Use only the IC cards, component grids and packs needed, insert them in the standard 4½″ frame rail and crimp into place with a tab element for direct insertion into standard PC connector. Cards feature a copper ground plane on the component side to minimize crosstalk.

### INTEGRID IC CARDS

Each card has positions for 3 standard IC's. All accept terminals with .062″ dia. barrel and .125″ dia. standoff shoulder. IC holes .031″; all others .040″ but may be enlarged to accept .062″ max. barrel dia.

### STRIP PACK

Provides space for 17 (½-watt) resistors or equivalent. Extra holes may be drilled per customer specifications.

### ECONO-GRID®

Provides 7 rows of ⅛″ dia. pads for a total of 140 holes. All holes .046″ dia., but may be enlarged to accept terminals with .062″ max. barrel; standoff shoulder .125″ max. dia.

### TAB ELEMENTS

Double readout, 22-position tabs 1/16″ thick of G-10 epoxy glass and 2-oz. copper. Contact fingers, .055″-.071″ thick, are ±.00025″ nickel plated and ±.00005″ gold plated min.. Holes are plated through; tabs meet IPC tolerances.

**Erie No. 4217-001**—Includes 1 each: frame rail, econo-grid, strip pack and connector element; plus, 2 each 4217-201 and 4217-202 IC socket strips. Net Each Kit.............. **$21.95**

**Erie No. 4217-002**—Same, except IC socket strips (2 each) are 4217-203 and 4217-204. Net Each Kit................ **$21.95**

## ALLEN-BRADLEY METAL GRID THIN FILM PRECISION RESISTOR NETWORKS

Networks consist of integrated films of chromium cobalt vacuum-deposited on specially selected substrates resulting in networks having precision tolerance and stability. Interconnections within network are a part of the deposited film, insuring circuit integrity and reliability. Excellent tracking characteristics are enhanced by depositing all resistors at one time on the selected glass substrate. Multilayer packaging techniques assure environmental protection. Networks are used in precision attenuators, voltage dividers, filter networks, measurement bridges, digital-to-analog converters, voice coding circuits and many other electronic circuits requiring resistors with close tolerances and low temperature coefficients.

## 2500 SERIES NATURAL CONVECTION HEAT SINKS

Patented "T" fin construction provides unusually large surface areas; permits as much heat dissipation as conventional units twice the size. **Model 2500 Series** are suited for applications requiring maximum dissipation in the smallest area. Designed for use when forced air cooling is not desired or possible; and, when ducted cooling is not available. **Model 2507** is designed for use in systems requiring efficient operation of **high power** components with free convection cooling. Wide mounting surface accepts all larger semiconductor power devices; permits ready access for wiring, monitoring or replacement.

### INTERLOCKING MODULAR HEAT SINKS

Interlocking modular heat sink components permit custom fabrication of heat sinks in many different physical configurations. Individual **Model 2520** sections may be interconnected either in a straight line by means of a **Model 2521** "H" extrusion, or at right angles with a **Model 2522** corner extrusion. Any number of heat sink sections may be interconnected in this manner Thermal resistance is approx. 1.1° C/watt at 40 watts in free air for 6" unit.

No. 2507-**040**-A00B is 4" long. All other numbers, as listed, are furnished in 3" lengths with black anodized finish except no. 2521-030-**A000** unanodized. Special lengths, finishes and mtg. hole patterns available.

### 3-FOOT LONG EXTRUSIONS

Three-foot extrusions of all 2500 Series models are available. To order, specify the desired Type No. (e.g., **2501**- etc.) and add suffix **-360-A000**. Unanodized extrusions furnished. **Prices on request.**

## LOW POWER TRANSISTOR HEAT SINKS

### GEAR TYPE HEAT SINKS

Reduction in space and weight, as provided by the **Model 2201** miniature heat sinks, permits improved design of component cards for computers and other printed circuit applications. Large heat transfer area, afforded by the beveled edge design, increases transistor performance. Extra heavy body assures strong clamping action and induces a large temperature drop within the heat sink itself.

### CONDUCTION HEAT SINKS

**Models 2801 and 2802** are specifically designed to dissipate heat from transistors by conduction. Maximum surface contact with chassis or other metallic mounting area assures effective heat transfer. **Model 2801** accommodates a single transistor, **Model 2802** accommodates two transistors.

### DIP HEAT SINKS

**Series 2906A** DIP heat sinks are designed for use with all standard dual-in-line IC packages. Provide low-cost, easy-to-use means of insuring optimal performance from DIP circuits. Temperature rise is less than 40° C at .3 watt; less than 50° C at .8 watt under natural convection conditions. Aluminum heat sinks have a hard-coat finish and are held between the socket and DIP by DIP pins as shown; three small projections on underside of heat sink insure a very snug fit. Models which accept DIPs up to 42 pins are available. No mounting hardware required.

## PCB-TAINERS®

Series 15, 16, 17 and 18

Low cost, one-piece spring clip retainers for PC boards. Provides positive retention under severe shock and vibration. Simplifies the production and assembly. Easy to install, easy to use. Saves time, trouble and expense. **Material:** Beryllium copper as per QQ-C-533. **Mounting Holes:** Three holes for all PCB-tainers 6″ and over, center hole eliminated on all sizes under 6″; spacing between end holes, length less .250″ except type 35-6, length less .50″ and type 35-5, .875″. **Finish:** Available in none, ebanol, cadmium plate, silver plate, copper plate and gold plate finish. Prices shown are for no finish (suffix **-1**; e.g., 154B-4-1) and cadmium plated (suffix -3). Write for complete information and prices on other finishes, board thicknesses and materials.

### SERIES 15B, 16B, 17B AND 18B

15B and 17B are for ¹⁄₁₆″ PC boards, 16B and 18B for ³⁄₃₂″ boards. Material thickness, .010″. Weight, .0562 oz. per inch. Mounting holes, .190″ dia. for type 15 and 16, .098″ dia. for others.

## BREADBOARD SOCKETS
### FOR FLAT-PACK INTEGRATED CIRCUITS

**Types 8076-1G3 and -1G7:** Single breadboard units for individual use or stacking on 8089 or 8100 50-station panels. Accept flat-packs with up to 14 leads on .050" centers. Size, 1.420" w. x 1.020" h. **Type 8076-10G1:** Mounting socket for use as platform for mounting other discrete components or as a base socket. **Type 8089-36G3R:** 50-station panel for life tests and breadboarding of flat-pack IC's. Snap-action covers for flat-packs, each with up to 14 leads spaced .050". Has takeoff positions to accept 10-pin connector. Jumpers available for interconnections (see next page). Size, 17⅜" w. x 6⅛" h.

## INTERFACING PLUGS

For input/output connections, interfacing, and testing terminals on same dimension as IC pattern. Strain relief cover design permits top, side, or bottom entry of wires. Polysulfone insulation; phosphor bronze, gold over nickel plated pins; stainless steel screws. Pin diameter .018" for 8136 Series panels. Available in 16-pin style as 1P16; listed items are 14-pin style. Size, 1P14, .450" w. x .750" d. x 7/16" h.; 1P16, .450" w. x .850" d. x 7/16" h. Molded plug assemblies supplied with #26 AWG stranded copper wire, Teflon® insulated. Standard wire lengths 12", 24", and 36"; other lengths available. Unassembled plug only available as 1P14-1 with solder pocket terminals and 1P14-3 with crimp terminals. **Prices on request.** ®Reg. DuPont TM.

## 26-PIN PLUG AND HEADER ASSEMBLY

Self-stripping "U" contact connection on round multiconductor cable. Plug (Augat No. 4P26-1) is glass-filled nylon with phosphor bronze, gold over nickel plated contacts. Cable (Augat No. 14010-2P8) comes in 100-ft. rolls; 28-gauge stranded 26-conductor copper wire with P.V.C. insulation. Header assembly (Augat No. 5P26-1) is glass filled nylon with phosphor bronze, gold over nickel plated terminals. Size: plug, .245" w. x 1.500" d. x .490" h.; header assembly, .240" w. x 1.900" d. x .125" h. Mounting centers, 1.600". **Prices on request.**

## TO-5 TRANSISTOR AND IC TEST SOCKETS

Teflon-insulated test sockets featuring easy-to-insert chamfered lead holes, raised boss, and fast push-fit mounting to assure low installation cost. Beryllium copper contacts and brass terminal sleeves are gold over silver plated. Low contact resistance (.015 ohm max.) after 50,000 insertions. Smooth-wiping leaf contacts. Rated 2 amps. Rear guide sleeves prevent lead shorting. Accommodate lead lengths ½" min. and diameters of .015"–.032".

## FLAT CABLE PLUG

Designed for use with 8136 Series packaging panels; plugs directly into IC pattern without soldering. Used for interfacing, input/output connections, and testing. May also be used for cable termination into PC board. Wire is 28-gauge stranded 14-conductor flat cable; impedance, 100 ohms; capacitance, 14 pF/ft. Insulator is glass-filled nylon, contacts are beryllium copper, gold over nickel plated; temperature range, −20° C to +105° C; current rating, 1 amp. Size (assembled), .435" w. x .760" d. x .210" h. Assembly tool, assembly fixture, and complete cable assemblies available on request.

# AUGAT INTEGRATED CIRCUIT SOCKETS, PANELS, RACK AND DRAWER ASSEMBLIES

## HIGH-DENSITY PACKAGING PANELS FOR DUAL INLINE PLUG-IN IC'S

Double-sided breadboard panels accept plug-in IC packages with flat or round leads, 300-mil row spacing and 100-mil lead spacing. Large contoured, closed-entry contacts. Power and ground planes at each pattern (power plane on bottom): Types DG1, FG1, RG2, RG4, PG3 and PG13 have two dummy pins for power and ground; types RG1 and PG1 have Pin 7 power and Pin 14 ground; types RG3 and PG5 have Pin 8 power and Pin 16 ground. Types DG1, FG1, RG1, RG2, RG3 and RG4 are 60-pattern panels; type UG1 is a universal type for any combination of 14, 16, 24 and 36 dual-in-line IC's, available in any multiple of 9 rows up to 54 rows as indicated by the last part of the Augat Number; PG types are available as panels in any multiple of 30 patterns up to 180 patterns, as indicated by last part of Augat Number. To extend flexibility of Series 8136 panels, socket/terminals may be purchased separately; prices on request.

## DUAL INLINE IC SOCKETS

For testing and packaging of 14-, 16-, 24-, and 36-pin integrated circuits. Accept packages with round or flat leads, 300-mil (500-mil for Series 324 type AG1; 600-mil for Series 324 type AG2 and Series 336) spacing between rows and 100-mil spacing between leads. Series 314 and 316 types AG1 and AG3 are high-profile types; Series 314 and 316 types AG5 and AG6 are low-profile types. Contoured entry holes guide IC leads into socket; suffix **R** indicates inner guide rails. Body is molded diallyl phthalate except (‡) phenolic; contacts are gold over nickel plate except (§) tin plate. Series 314 and 316 are sold in multiples of 5 only.

## Sockets, Holders, Boards

### DUAL IN-LINE IC SOCKETS

For 14, 16, 18, 24 and 36 pin dual in-line integrated circuits with either Wire-Wrap* or solder-tab terminations. One-piece molded diallyl insulators withstand high temperatures and provide excellent mechanical stability (Nos. -3777 are one-piece molded glass-filled nylon with anti-moisture bosses). Phosphor bronze contacts accept flat or round pins up to .024" dia. Standard terminal plating is **-03** gold for all Wire-Wrap and -3777 solder tab sockets; **-04** electro-tin for all solder-tab sockets. Sockets can be supplied with electro-tin plating on Wire-Wrap pins or with gold plating on solder-tab pins; prices on request. May be permanently mounted individually (rivet or screw) or press-mounted in PC boards or panels for production or breadboarding.

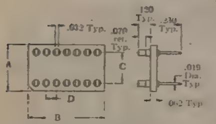
### COMPONENT SOCKET ADAPTERS



Component adapters plug into standard 14, 16, 24 or 36 pin dual in-line sockets as well as CAMBION's Integrated Socket strip. Larger width sizes for wider components straddle two sockets or socket strips. Terminal pairs are on .100" or .200" grid centers for varying component sizes; slotted for ease of parts mounting. Terminal is brass, QQB-626C copper alloy 360, half-hard, with .000050" hard gold plating over gold flash per MIL-G-45204 over .0002" copper plate. Board material is .062" type GEE glass epoxy per MIL-P-18177.

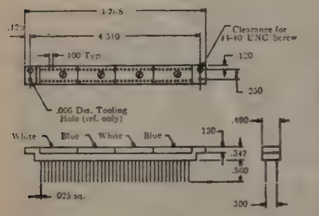
### 80 PIN DUAL IN-LINE SOCKET STRIP



Molded diallyl body .025" sq., Wire-Wrap posts and spring contacts, electro-tin plated. Mounts all dual in-line devices without a PC board. Flanges at the ends provide for independent mounting or into CAMBION mounting frame or relay rack drawers. Pins are replaced by removing the screw down covers. Socket strips accept five 14 pin DIPs, four or five 16 pin DIPs. Wider MSI or LSI DIPs can be mounted by bridging between two properly spaced strips.

CAMBION drawer for 19" relay rack 1¾" h. or 3½" h.; holds approx. 600 ICs. Information on request: 706-6000 Series.

### PRECUT AND STRIPPED WIRE KIT

For wire-wrapping. Solid copper 30 AWG white insulated Kynar* wire, silver plated, ends stripped to tolerance. Kit contains 13 pkgs. of varied lengths from 1" thru 9". Per pkg.: 1" thru 4.5", 100 pcs.; 5" thru 9", 50 pcs. Also available 1.0" thru 25.0" lengths in black, red and white insulation on request.

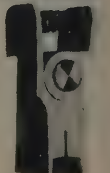
### IC INSERTION-EXTRACTION TOOL



Handy tool properly positions integrated circuits for insertion or extraction by securely gripping the IC between the leads and under the body. Practically any IC with 14 or 16 leads aligned on 0.300" centers can easily be inserted or extracted regardless of tight packaging and without damage to the fragile IC leads. Basic material of insertion-extraction tool is plastic.

## HIGH DENSITY WIRE-WRAP* CAMBI-CARDS®

Printed circuit boards designed to accept dual in-line IC sockets, in-line integrated circuits and discrete components in a tightly arranged package for Wire-Wrap interconnections. Each socket position on **715 Series** (on every other row on **714 Series**) has two auxiliary pins to permit connecting each IC to power and ground planes. Cards with sockets affixed; with sockets and spaces for discretes; for all discretes; copper-clad and blank cards; card extenders and general purpose cards without sockets but with grid patterns permitting mixing any combination of in-line ICs in any mounting pattern. All cards have edge connectors which plug into standard CAMBION card files, available with or without mating power planes. Board material—.062" thick, double clad copper, epoxy glass cloth type FL-GE per MIL-P-13949. Pin plating, gold over phosphor bronze material.

## DIGITAL LOGIC

CAMBION offers a complete range of logic function cards, all of which may be used with above standard, 4½" h., "714" and "715" Series Wire-Wrap cards designed for general purpose use. Listed below are some Interface and Timing devices which may be added to and complement CAMBION's whole system of integrated packaging. Additional logic function cards (over 300 different designs available) catalog or technical data sheets are available on request. All cards are 4.5" x 4.5" and mate with CAMBION's 70 pin edge connector, which plugs into a wide range of standard CAMBION card files, power planes, etc.

# TEKNA

## TEK-PAD TRANSISTOR AND IC MOUNTING PADS

Tek-Pads and Tek-Caps insulate, ventilate, provide shock and vibration resistance, protect from excessive heat and solder, and permit washout space. Several items give room for test probing from the top side of the board, allowing for easy replacement of defective units. Tek-Pad spreaders relieve the bending stress of leads. Press-fit DIP Tek-Pads allow preassembly of pads prior to insertion of unit by automatic equipment. **Materials:** Nylon per MIL-P-20693. **Tolerances:** ±.005″ or less. **Colors:** Specify white or black; other colors available on special order. **Federal Supply Code:** #24227.

## UNIVERSAL PLATED CIRCUIT CARDS

### TYPE 13500 UNIVERSAL CIRCUIT CARD (FIG. A)

Has 233 mounting pads with one or more holes each, front and back, for a total of 444 holes. Hole placement permits insertion of components directly into board. Land pattern is compatible with standard 0.1″ grid design. Has 22 contact fingers to fit any standard plug-in, right-angle or swage-type connector with .156″ spacing. Card may be sheared or sawed to adapt to any circuit. Base is 1/16″ paper epoxy (Type 13500-1) or glass epoxy (Type 13500-2) with gold plated finish. Size, 4″ x 4½″; hole size, .052″.

### TYPE 13510 UNIVERSAL CIRCUIT CARD (FIG. B)

Advanced design card has specific transistor locating holes, ground bus down the center, and convenient location for pad rows. Has 190 mounting pads of one or more holes each, front and back, 421 holes total, with 22 fingers for any connector with .156″ spacing, plus 22 pairs of pads for Elco type connectors. Base is 1/16″ paper epoxy (Type 13510-1) or glass epoxy (Type 13510-2); gold plated. Size, 4″ x 4½″; hole size, .052″.

### TYPE 13511 UNIVERSAL CIRCUIT CARD

Similar to Type 13510, with over 300 mounting pads, 650 holes per card; 22 fingers on each end for connectors with .156″ spacing, plus 22 pairs of pads for Elco type connectors. Transistor locating holes, ground bus down center. Size, 4″ x 7″. Made of 1/16″ paper base epoxy, gold plated. Hole size, .052″.

### TYPE 13600 EXTENDER CARDS

For extending fingers of circuit cards to permit access to boards mounted in racks or panels. Frees both sides of circuit for maintenance and testing during operation. Wire harness ends may be soldered to card for plug-in use. Size, 5″ x 8″ with 43 extension strips on each side of board except Model 13605, 2.976″ x 3.273″ with 18 extender strips each side and Model 13610, 3″ x 4.86″ with 25 extender strips either side. Base is 1/16″ paper epoxy (Type 13600-1) or glass epoxy (Type 13600-2). Standard .156″ spacing for most printed circuit connectors.

## TERMINAL CARDS AND BOARDS

### SERIES 13750 PLUG-IN TERMINAL CARDS

For use in prototype printed circuitry and design testing. Each card has over 300 terminal holes in seven rows of ½″ spacing on each side. Permits mounting of almost unlimited number of components on either or both sides of card. Made of 1/16″ paper base epoxy, 4″ x 4½″, with 22 gold plated fingers spaced .156″ for use with most printed circuit connectors. Type 13750 has .093″ holes. Type 13751 has .063″ holes.

### SERIES 13800 PRE-PUNCHED TERMINAL BOARDS

Overall grid of pre-punched holes on 4″ x 7″ card for breadboard and production applications. Ideal for subminiature circuits using transistors and small diodes. Boards have 646 holes (19 x 34) on 0.2″ centers to accommodate a variety of standard turned and push-in terminals. Paper base epoxy, 1/16″ thick. May be broken along holes or sawed to desired size. Type 13800 has .062″ holes, Type 13801 has .093″ holes.

## INTEGRATED CIRCUIT CARDS

For quick, easy assembly of prototypes and short runs using TO-5's and flat packs Up to six TO-5's, six flat packs or combinations of both can be mounted. The same card can be used directly from prototype to production. Two-sided cards of 1/16″ G-10 glass epoxy, gold plated, have flat pack mounting tabs on one side and TO-5 pads on the other. Connector strips and TO-5 pads have .032″ hole size; interconnection pads have .040″ hole. Boards are identical except for connector pattern.
**Triad No. 13540 (Fig. C)**—Mates with Winchester PC25D62D24-1, a 25-contact double-side readout connector with contacts on .050″ centers. Size, 3.00″ x 3.187″.
**Triad No. 13541 (Fig. D)**—Mates with Winchester 8B36S, an 18-contact double-side readout connector with bifurcated contacts on .156″ centers. Size, 2.976″ x 3.273″.

## PLATED CIRCUIT CARDS WITH WINCHESTER CONNECTORS

Standard Triad circuit cards with proper Winchester connector for easy assembly of prototypes and short runs. Winchester 8BD18S, 8BD22S connectors are molded phenolic MFG per MIL-M-14, with bifurcated contacts and double-acting spring grip for constant and non-damaging contact. Individual contact identification on front and rear. Universal circuit cards 13500, 13510 and 13511, and terminal cards 13750 and 13751, include 8BD22S connector. Integrated circuit cards 13541 and 13542 take 8BD18S; types 13540, 13543, 13544, 13545, 13610 have PC25D62D24-1 connector* with straight contact tabs for lead insertion through holes; short path contacts for low resistance between board and back plane.

## CIRCUIT CARD EXTRACTORS

Pull out circuit cards quickly and easily, without damage to components. **Type CE-4:** Steel type adjusts for cards 4–6″ wide, grabs edges securely as lever is pressed; 6½″ x 4⅜″. **Type CE-1:** For limited space use; plastic, 4¼″ x 2½″. Becomes part of card until released. Cam action, 60-lb. pull. **Type CE-5:** For integrated circuit cards and modules 1–4″ wide; size, 4¼″ x 4½″.

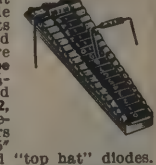
## LEAD BENDING GAUGES



Simple, precise gauges can be used to form up to 1200 leads per hour, easily and without damage to components. Four models provide fast, accurate forming for most components used in printed circuits. Each has 40 numbered positions for various lead formations; leads are bent rapidly with gentle finger pressure. **Type MK-1**, with .375″ to 1.50″ centers is for ¼-watt resistors, plus diodes, disc capacitors and other components of similar size. **Type MK-2**, with .50″ to 1.50″ centers, is for ½-watt resistors. **Type MK-3**, with .75″ to 2.50″ centers is for 1-watt resistors. **Type MK-4**, with .875″ to 2.50″ centers, is for 2-watt resistors and "top hat" diodes. Proper lead spacing can be assured by aligning the gauge between holes or terminals to be used, noting the slot number that corresponds to the required size. Can also be used to form jumper wires.

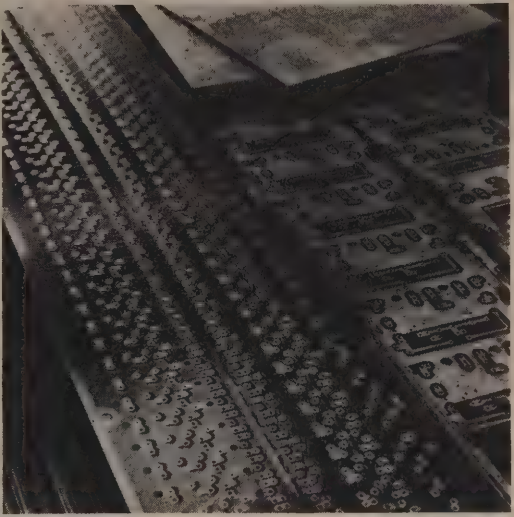
# Westinghouse MICARTA® COPPER-CLAD MATERIALS



Comprehensive line of copper-clad Micarta for printed circuit manufacture available in two types: Rigid copper-clad laminate sheet for conventional printed circuits and thin, rigid copper-clad sheet and pre-preg sheets specifically for building multi-layer printed circuits. Offer a broad range of properties and combinations of properties to fill many kinds of production and end-use requirements. **Measle Resistance:** Types 65M27S, 65M28S and multi-layer are measle resistant even after storage under humid conditions. Have greater retention of flex and copper bond strength at elevated temperatures. **Punchability:** Strength and resiliency of Micarta combined with the adhesive strength and malleability of the pure copper foil, permits easier punching, sawing or drilling without peeling, tearing, lifting or haloing. **High Bond Strength:** Resist pad lifting during circuit fabrication and assembly or during final product use. **High Solder Resistance:** Copper-clad materials can be solder floated without blistering or distortion so that soldering operations can be more efficient. **Stability:** Resist heat, cold, moisture, acids, alkalies, solvents and oils. **Sheet Size:** 36″ x 48″ only; except 65M27-UT available in 36″ x 36″ and 36″ x 43″. Other sheet sizes available on special order. To minimize warpage, material should be stored flat and not on edge.

| W-H Grade Number | Typical Use |
|---|---|
| **65M02** | TV and similar circuits produced by automatic processes that require very flat, strong boards |
| **65M03** | Radio and TV circuits |
| **65M05** | Radio and TV circuits; flame-retardant where good electrical and punching is required |
| **65M25S** | Computer and electronic circuits where weight, space saving are important |
| **65M24** | Commercial computer cards |
| **65M27S, 28S** | Computer circuits where good drill wear is important |
| **65M27-UT** | Multi-layer miniaturized circuits |
| **HT-11907** | Multi-layer miniaturized circuits, pre-preg |

## SERIES 200 FEATHERWEIGHT DISSIPATORS

Unique fin design permits horizontal or vertical orientation with excellent natural convection performance in either position. In forced convection applications, the axis of the semiconductor may be oriented either perpendicular or parallel to the direction of air flow. Max. contact thermal impedance for the semiconductor case to the dissipator I.D. is 5° C/W for 201, 202, 203 and 222, 3° C/W for 204, 205, 207, 209 and 224, 2° C/W for 211, 213 and 215. Delta-T No. 120 thermal joint compound will reduce impedance by a factor of 8. Beryllium copper per MIL-C-81021 with black ebonol C finish per MIL-F-495; also available with no finish, prices on request.

## SERIES 490 KING SIZE HEAT SINKS (FIG. H)

Natural convection sinks for multi-cell high power rectifiers. Model 490-12.0, under natural convection conditions, will permit a case temperature rise of a 3½″ sq. rectifier of only 110° C at 600 W dissipation. Full curves for all types available on request. Aluminum alloy 6063T5 per QQ-A-200; black anodize finish per MIL-A-8625 Type II except for the semiconductor mounting surface where the electrical stud and high current busswork connections are made. Four mounting lugs on each end with std. ⅜″ dia. bolts, nuts and washers; or, use Type 109 mounting brackets (glass fiber reinforced plastic angles) for wall mounting or insulating (two required per sink), not supplied. Size, 6.75″ w. x 9.25″ d. x 3.5″ h., 490-3.5; 6″ h., 490-6.0; 12″ h., 490-12.0. All have 3½″ semiconductor mounting area. For square slots add **8c** per part. Part No. letter suffix indicates mounting hole type; see *Ordering Information below.

## SERIES 500 COPPERCOOL FORCED CONVECTION COOLERS

For critical designs requiring maximum performance under medium air pressure. Take semiconductors of any mounting style. Hose adapters and top covers available; prices on request. **501** (**Fig. I**): Thermal resistance 0.5° C/watt at 32 CFM; 1¾″ w. x 2¼″ d. x 1¾″ h. **502:** Similar to (Fig. I) except has set of fins on each side of semiconductor. Thermal resistance 0.3° C/watt at 26 CFM; 3½″ w. x 1¾″ d. x 1¾″ h. **503:** Larger version of 502. Thermal resistance 0.3° C/watt at 15 CFM; 3½″ w. x 3½″ d. x 1¾″ h. **504** (**Fig. J**): Thermal resistance 0.3° C/watt at 40 CFM; 1¾″ sq. x 1¾″ h. **505:** Same as 504, but fins extend full width of mounting surface. Thermal resistance 0.3° C/watt at 21 CFM; 1¾″ w. x 2″ d. x 1¾″ h. Base and fins are copper with black ebonol C finish. Part No. letter suffix indicates mounting hole type; see *Ordering Information below for other mounting types available—prices on request.

## TYPE 690 CIRCUIT BOARD HEAT SINKS (FIG. A)

Designed to give the most power dissipation per unit cost. Power dissipation of 10–20 watts is obtainable. Made of highest thermally conductive pure aluminum, 1100 alloy. Available in both plain (suffix **P**) and black anodize (suffix **B**) finish. Available mounting patterns are for TO-3 and TO-66 JEDEC packages.

## SERIES 254 THERMAL RETAINERS FOR TO-5 CASES

Designed as thermal links from TO-5 semiconductor case to cooler or chassis member acting as heat sink. Provides heat sink contact at bottom of case flange for best cooling. Ideal for use with TO-5 Kovar header case. All six types include 254-LS stainless steel locking spring for insertion behind transistor, using Type 120 thermal compound at header. Made of Zamak 3, with chromate conversion finish. Type 254-S1 has built-in electrical isolation, with stud mount of 6061-T6 aluminum with gold irridie finish. Supplied less mounting hardware.

**Delta Coate 151:** Thermally conductive dielectric epoxy coating which may be applied using conventional paint spraying equipment. A .006" coating yields 1000 V working dielectric strength for applications such as electrically isolating semiconductors from their heat sinks. **Delta Bond 152:** Contains no volatile solvents and is therefore 100% solid adhesive. Effective on porous and non-porous surfaces such as metals, glass, ceramics and most plastics. **Delta Cast 153:** Pourable casting resin for encapsulating components and assemblies. Thermal expansion is similar to aluminum and copper and assemblies will operate over a very wide temperature range. **Delta Bond 154:** Medium viscosity aluminum filled resin with the best thermal conductivity of this series. Not recommended for use as an electrical insulator nor conductor; principal application is that of a good thermal-mechanical adhesive for applications such as bonding fins to base plates or semiconductor mounting blocks or brackets to heat sinks. Machines freely. **Hardeners:** Available as listed for use with resins. Working time, cure time and properties of cured resins vary. For additional data request Bulletin No. 28.

### SPRING ASSEMBLIES

Each leaf provides up to 400 lbs. clamping force; integral force indicator reads lbs./leaf in 100-lb. graduations (available without indicator). Stainless steel alloy has low creepage rate (less than 15% in 5 years at 400 lbs./leaf at 150° C operating); better than the best automotive valve-spring steels. Swivel pad is 2024 aluminum.

## SERIES 260 CUP CLIPS FOR TO-5 AND TO-18 CASE

Brass base per QQB626a Comp. 22, black ebonol C finish per MIL-F-495. Cups are beryllium copper alloy #10 per MIL-C-81021, black ebonol C finish per MIL-F-495. Ceramic spacers are beryllium oxide, 99% purity, 95% density. Flared lip standard for easy component insertion. **Plain Mounting Base Types** (**Fig. B**): Can solder into place or used with pan head screws (#4 for TO-5; #2 for TO-18); 260-P5B and 260-P18B are for mounting with thermally conductive adhesive such as Delta Bond 152. **Tapped Base Types** (**Similar Fig. B**): Use 4-40 screw for TO-5; 2-56 for TO-18; 260-4TH5B and 260-2TL18 have thick base for wider screw length tolerances. **Stud Mounting Types** (**Figs. C and D**): Have 6-32 or 10-32 studs for TO-5 case; 4-40 and 6-32 for TO-18. Operate continuously between −100° F to +300° F. **Suffix B** (e.g., 260-P5**B**): Beryllium oxide insulated for operations requiring low stray capacity to heat. Hypot rating 1000 VAC, 60 Hz for TO-5; 750 VAC, 60 Hz for TO-18. Color coded white. **Suffix E:** Epoxy insulated; color coded yellow. Hypot rating, 500 VAC, 60 Hz for TO-5; 250 VAC, 60 Hz for TO-18. **No Suffix:** Indicates non-insulated. **Size:** 0.29" I.D. cup, hex base .37" across flats for TO-5; .170" I.D. with .25" hex for TO-18.

## THERMAL RETAINERS (FIG. E)

Two cup clips are bonded with Delta Bond 152 to an aluminum base precoated with Delta Coate 151H. This provides a thermal equalizing link with excellent thermal dissipation characteristics. Clips are electrically insulated from the strip and each other. Cup clip beryllium copper with black ebonol C finish; base aluminum 1100-H14 clear irridite and Delta Coate 151 finish. **260-5D:** Thermal resistance from TO-5 cup clip to mounting base is 13° C/watt and from cup to cup is 30° C/watt. **260-18D:** Thermal resistance from TO-18 cup clip to mounting base is 24° C/watt and cup to cup is 60° C/watt.

## NIXIE® TUBE BEZEL ASSEMBLIES

These assemblies can be used with Burroughs driver modules; e.g., BIPCO® drives, BCD decoder/drivers, counters, etc. Specify type of module to be used. Include appropriate indicator tube sockets mounted in place. Complete readout driver modules can be mounted to the bezel at no extra charge (specify). Decimal points are available mounted in position with complete socket assembly. Add **$3.00** per decimal point to the basic price. For colons, add **$6.00** per colon to the basic price.

## E G & G XENON FLASHTUBES, TRANSFORMERS, KRYTRONS, PHOTODIODES

### XENON FLASHTUBES

Efficient light sources convert stored electrical energy into visible light bursts and radiant energy in the ultraviolet and infrared regions. Produce high peak light of comparatively short flash duration. Spectral quality is essentially like daylight extending well into UV and IR ranges. Used for laser stimulation, ballistic studies, semiconductor research, visual signal devices, readout, printed circuits, visual strobes, etc.

### PHOTODIODES

Fast response light detector operates in visible and near infrared regions, 0.35 to 1.13 microns. Operates at a near constant quantum efficiency over the range of .5 to .95 microns (nearly seven times that of S-4 phototubes) with sensitivity of .5 μA/μW at 0.9 microns. Speed response comparable to good photomultipliers, exceeding most semiconductors. Typical rise time, 4 x $10^{-9}$ sec.; fall, 15 x $10^{-9}$ sec. Noise equivalent power is a function of frequency in the order of 7.9 x $10^{-13}$ watts/$(Hz)^{1/2}$ at 1000 Hz. Dark current is lower than .05 x $10^{-6}$ amps at 10 V bias. For low light level signals, 1 V bias is often sufficient for optimum signal-to-noise ratio. Ideal for receiving equipment, for lasers and injection laser systems, measurements on modulator and pulsed light sources, measurements of light intensity and waveforms, and color change detection. In TO-5 package. Aperture .100″ dia. quartz.

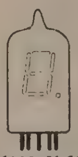
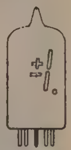
## READOUT TUBES

Y-4075



Y-1938, Y-1939

Y4105



Y4102

Rigid construction, fluorescent vacuum readouts at low cost for low power applications in desk calculators, computer consoles, frequency counters, digital voltmeters and other test equipment. Seven-bar segmented, side display type gives parallax-free character formation in single plane. Display highly visible blue-green characters of approx. 200 ft.-Lambert uniform brightness. Operates at very high speed range through the use of low resistance phosphor segments energized by electrons emitted by a directly heated common cathode. Responds to signal levels up to 55 VDC max., typical operation for high brightness is 25 VDC. Energizing voltages of cathodes are 1.5 volts, Y-1938, Y-1939 or Y-4102; 1.2 volts, Y-4075 or Y-4105; AC or DC; at 42 mA all models. Compatible with solid state IC logic packages. **Size:** Y-1938, Y-1939 or Y-4102, .845" dia. x 1¾" h.; Y-4075 or Y-4105, .375" dia. x 1⅝" h. **Base:** Y-1938 or Y-4102, 9 pin; Y-1939, Y-4075 or Y-4105, 10 pin. **Character Size:** Y-1938 or Y-1939, .360" x .570", slanting to right 8°; Y-4075, .230" x .430", slanting to right 4°. **Characters:** 0–9, A, C, E, F, G, H, I, J, L, O, P, S, U, Y-1938, Y-1939 or Y-4075; plus and minus one with decimal point, Y-4102 or Y-4105.

Gas filled, cold cathode numerical indicator tubes designed for decimally coded readout applications such as basic counter and computer circuits. Common anode and metallic cathodes form numerical or polarity symbols and provide high readability with a brilliant orange-red glow. All-electronic design enables high speed operation with low power drain.

# RECEIVING TUBES

## TUBES MAY BE ASSORTED—SEE TABLE HEADINGS BELOW

**The receiving tubes listed below and on the following pages represent practically all types generally in demand. Many pre-war types have not been included in this list in order that we catalog a complete listing of new types now available. If you require a particular type which is not listed it is due to space limitations rather than our inability to supply. We invite your inquiries and orders for all types whether listed or not as we can supply many pre-war types from stock and as new types are released by the manufacturer we will have them immediately available. While we try to maintain complete stocks at all times, the listing and pricing of a particular tube does not necessarily mean it is immediately available. Average shipping weight per tube, 4 oz.; per 100 tubes, 25 lbs.**

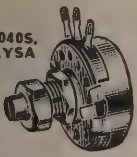
# ALLEN-BRADLEY HOT-MOLDED COMPOSITION POTENTIOMETERS

## 2¼-WATT HOT-MOLDED COMPOSITION POTENTIOMETERS

These hot-molded composition potentiometers are rated 2¼ watts at 70° C with a rotational life of over 100,000 cycles with less than 10% resistance change. Smooth adjustment with infinite resolution. Designed for continuous operation in ambient temperatures from −55° C to +120° C. Low initial noise level actually improves with use. Excellent for high frequency applications. Rugged, dust-tight and splash-proof. Lockwasher and mounting nut supplied. Marked with Type and MIL numbers (Type numbers only on JA1N200P-). Case Size: ⅝″ x 1 3/32″ diameter.



**Type JA1L040S, MIL-R-94 RV4LAYSA:** Style RV4. Slotted shaft ⅝″ long x ¼″ dia.; ½″ lg. true-collet-action locking bushing with locking nut. Linear taper. Mounts in ⅜″ hole on panels up to ⅛″ thick.

## ½-WATT COMPOSITION POTENTIOMETERS

Miniature, hot-molded composition variable resistors rated ½ watt at 70° C with a rotational life of over 50,000 cycles with less than 10% resistance change. Smooth adjustment with infinite resolution. Designed for continuous operation in ambient temperatures from −55° C to +120° C. Low initial noise level improves with use. Excellent for high frequency applications. Rugged, immersion-proof with watertight bushings. Linear taper. Lockwasher and mounting nut supplied. Case Size: ¹⁵⁄₃₂″ x ½″ dia.

### CERMET TRIMMERS

**Type DP**—Dual inline 20-turn cermet trimmer is compatible with TO-116 package; designed for automatic insertion. Rated ¾ watt at 25° C, derated to ½ watt at 85° C; derate to zero at 125° C; max. continuous working voltage, 300 V. Temp. range, −65° C to +125° C. Temp. coefficient less than ±100 ppm/° C. Rotation, 20 turns nominal. Resistance change, less than 1% after soldering, less than 2% after 200 cycles (8,000 turns) under load, after temperature cycling or after humidity test, less than 3% total after 1,000-hour load life test. Marked with A-B No. and nom. resistance. Size, .250" w. x .76" lg. x .195" h. Tolerance, 10%. **Type 75**—Specifications essentially identical to Type DP, except size, .19" w. x .75" lg. x .27" h.

## CERMET TRIMMERS

Ideal when environmental conditions are toughest. Excellent performance when temperatures are extreme, humidities extra high, and mechanical shocks and vibrations are particularly severe. A-B Cermets have long load and wear life. In severe environments, they maintain their setting to give dependable performance. Leads are permanently fastened, anchored and bonded. All are MIL grade and immersion-proof.

**Type CJP1N**—Designed for severe environmental applications. Rated 5 watts at 70° C, derated to 0 at 150° C. Less than 3% resistance change after temperature cycling; less than 5% after moisture resistance test; less than 5% permanent change after 1,000 hours at rated load. Temperature coefficient, ±250 ppm, −65° C to +150° C. Linear taper, 10% tolerance only; ⅜″ lg. plain bushing with ⅞″ lg. x ¼″ dia. slotted shaft. **Type CJP1L**—As above, but ½″ lg. locking bushing with ⅝″ lg. x ¼″ dia. slotted shaft. **Type CJK1N**—Dual potentiometer; each section as above; ⅜″ lg. plain bushing with 2″ lg. x ¼″ dia. plain shaft. Supplied with hardware. All types mount in ⅜″ hole. Case size, CJP, ⅝″ max. x 1 5/32″ max. dia.; CJK, 1 17/64″ max. x 1 5/32″ max. dia.

## SERIES 70 MOD POTS

Modular potentiometers can be assembled with up to four sections using carbon composition and cermet modules interchangeably. Space does not allow a full display of all possible variations; write for full information. Supplied with hardware. Module size, ⅝″ sq. Single controls 19/32″ deep; ⅜″ dia. bushing, ⅜″ long, is standard, **Type 70A1N**—Hot-molded carbon composition element rated 1 watt at 70° C, derated to 0 at 125° C. Resistance change, less than 2% after shock and vibration tests, less than 3% after temperature cycling or low temperature exposure, less than 10% after load life, moisture and rotational life tests. Linear taper only; ⅜″ lg. plain bushing with ⅞″ lg. x ¼″ dia. slotted shaft is standard. **Type 70A1L**—As above, but ½″ lg. locking bushing with ⅝″ lg. slotted shaft. **Type 70B1N**—Cermet element rated 2 watts at 70° C, derated to 0 at 150° C. Temperature characteristic less than 250 ppm. Resistance change, less than 2% after shock, vibration and low temperature exposure tests, less than 3% after temperature cycling, less than 5% after load life and moisture tests, less than 10% after rotational life test. Linear taper only; ⅜″ lg. plain bushing with ⅞″ lg. slotted shaft. **Type 70B1L**—As above, but ½″ lg. locking bushing with ⅝″ lg. slotted shaft.

### WIRE-WOUND TYPES

**Series 992:** Power Rating, 1 watt at 40° C. Resistance Tolerance, ±10% below 75 ohms; ±5%, 100 ohms and above. Temperature Range, −55° C to +125° C. Temperature Coefficient, 70 ppm/° C. Adjustment, 22 turns. Size, 0.32″ h. x 0.28″ w. x 1.25″ lg. Terminals: **L, P** or **SL.** Standard Resistances: Specify 50, 100, 200, 500, 1K, 2K, 5K, 10K, 20K or 50K ohms.

**Series 2600 Microminiature:** Power Rating, 1 watt at 40° C. Resistance Tolerance, ±10%. Temperature Range, −55° C to +125° C. Temperature Coefficient, 100 ppm/° C. Adjustment, 22 turns. Size, 0.31″ h. x 0.16″ w. x 0.75″ lg. Terminals: **P** only. Standard Resistances: Specify 100, 200, 500, 1K, 2K, 5K, 10K or 20K ohms.

**Series 2860 High Temperature:** Meets MIL-R-27208 style RT11. Power Rating, ¾ watt at 85° C. Resistance Tolerance, ±5%. Temperature Range, −55° C to +150° C. Temperature Coefficient, 50 ppm/° C. Adjustment, 22 turns. Size, 0.32″ h. x 0.28″ w. x 1.25″ lg. Terminals: **L, P** or **SL.** Standard Resistances: Specify 10, 20, 50, 100, 200, 500, 1K, 2K, 5K, 10K, 20K or 50K ohms.

**Series 3600 Microminiature:** Power Rating, ½ watt at 40° C. Resistance Tolerance, ±10%. Temperature Range, −55° C to +125° C. Temperature Coefficient, 100 ppm/° C. Adjustment, 23 turns. Size, ⅜″ sq. x 0.20″ d. Terminals: **P, W** or **X.** Standard Resistances: Specify 100, 200, 500, 1K, 2K, 5K, 10K or 20K ohms.

**Series 3800* Microminiature:** Solvent resistant. Power Rating, 1 watt at 40° C. Resistance Tolerance, ±10%. Temperature Range, −55° C to +125° C. Temperature Coefficient, 100 ppm/° C. Adjustment, 22 turns. Size, 0.31″ h. x 0.16″ w. x 0.75″ lg. Terminals: **P** or **K.** Standard Resistances: Specify 10, 20, 50, 100, 200, 500, 1K, 2K, 5K, 10K or 20K ohms.

### CERMET INFINITE RESOLUTION TYPES

**Series 3805* Microminiature:** Solvent resistant. Power Rating, ¼ watt at 40° C. Resistance Tolerance, ±10%. Temperature Range, −55° C to +125° C. Temperature Coefficient†, ±150 ppm/° C. Adjustment, 22 turns Size, 0.31″ h. x 0.16″ w. x 0.75″ lg. Terminals: **P** or **K.** Standard Resistances: Specify 50, 100, 200, 500, 1K, 2K, 5K, 10K, 20K, 50K, 100K or 500K ohms.

*For Vista-Trim view top, use suffix **-2**, (e.g., 3805P-100-2).
† ±100 ppm/° C also available in 1K and up resistance values.

### WIRE-WOUND TYPES

**Series 994:** Power Rating, 1 watt at 40° C. Resistance Tolerance, ±10% below 75 ohms; ±5%, 100 ohms and above. Temperature Range, −55° C to +125° C. Temperature Coefficient, 70 ppm/° C. Adjustment, 22 turns. Size, 0.32″ h. x 0.28″ w. x 1.25″ lg. Terminals: **L, P** or **SL.** Standard Resistances: Specify 50, 100, 200, 500, 1K, 2K, 5K, 10K, 20K or 50K ohms.

**Series 2300 Microminiature:** Meets MIL-R-27208 style RT24. Power Rating, ¾ watt at 85° C. Resistance Tolerance, ±5%. Temperature Range, −55° C to +150° C. Temperature Coefficient, 50 ppm/° C. Adjustment, 26 turns. Size, ⅜″ sq. x 0.198″ d., P; 0.415″ h. x 0.193″ w. x 0.375″ lg., W; 0.415″ h x 0.200″ w. x 0.375″ lg., X. Terminals: **P, W** or **X.** Standard Resistances: Specify 10, 20, 50, 100, 200, 500, 1K, 2K, 5K, 10K or 20K ohms.

**Series 2610 Microminiature:** Power Rating, 1 watt at 40° C. Resistance Tolerance, ±10%. Temperature Range, −55° C to +125° C. Temperature Coefficient, 100 ppm/° C. Adjustment, 22 turns. Size, 0.31″ h. x 0.16″ w. x 0.75″ lg. Terminals: **P** only. Standard Resistances: Specify 100, 200, 500, 1K, 2K, 5K, 10K or 20K ohms.

**Series 2750 High Temperature:** Meets MIL-R-27208 style RT12. Power Rating, ¾ watt at 85° C. Resistance Tolerance, ±5%. Temperature Range, −55° C to +150° C. Temperature Coefficient, 50 ppm/° C. Adjustment, 22 turns. Size, 0.32″ h. x 0.19″ w. x 1.25″ lg. Terminals: **L, P** or **SL.** Standard Resistances: Specify 10, 20, 50, 100, 200, 500, 1K, 2K, 5K, 10K, 20K or 50K ohms.

### WIRE-WOUND TYPES (CONT'D)

**Series 2850 High Temperature:** Meets MIL-R-27208 style RT11. Power Rating, ¾ watt at 85° C. Resistance Tolerance, ±5%. Temperature Range, −55° C to +150° C. Temperature Coefficient, 50 ppm/° C. Adjustment, 22 turns. Size, 0.32″ h. x 0.28″ w. x .25″ lg. Terminals: **L, P** or **SL.** Standard Resistances: Specify 10, 20, 50, 100, 200, 500, 1K, 2K, 5K, 10K, 20K or 50K ohms.

**Series 2900 Subminiature:** Meets MIL-R-27208 style RT22. Power Rating, ¾ watt at 85° C. Resistance Tolerance, ±5%. Temperature Range, −55° C to +150° C. Temperature Coefficient, 50 ppm/° C. Adjustment, 25 turns. Size, ½″ sq. x 0.187″ d., L; 0.220″ d., P; 0.195″ d., W or X; 0.575″ h. x 0.190″ w. x 0.500″ lg., Y. Terminals: **L, P, W, X** or **Y.** Standard Resistances: Specify 10, 20, 50, 100, 200, 500, 1K, 2K, 5K, 10K, 20K or 50K ohms.

**Series 3610 Microminiature:** Power Rating, ½ watt at 40° C. Resistance Tolerance, ±10%. Temperature Range, −55° C to +125° C. Temperature Coefficient, 100 ppm/° C. Adjustment, 23 turns. Size, ⅜″ sq. x 0.20″ d. Terminals: **P, W** or **X.** Standard Resistances: Specify 100, 200, 500, 1K, 2K, 5K, 10K or 20K ohms.

**Series 3810* Microminiature:** Solvent resistant. Power Rating, 1 watt at 40° C. Resistance Tolerance, ±10%. Temperature Range, −55° C to +125° C. Temperature Coefficient, 100 ppm/° C. Adjustment, 22 turns. Size, 0.31″ h. x 0.16″ w. x 0.75″ lg. Terminals: **P** or **K.** Standard Resistances: Specify 10, 20, 50, 100, 200, 500, 1K, 2K, 5K, 10K or 20K ohms.

**Series 6900 Subminiature:** Power Rating, 1 watt at 40° C. Resistance Tolerance, ±10%. Temperature Range, −55° C to +125° C. Temperature Coefficient, 50 ppm/° C. Adjustment, single turn. Size, 0.500″ dia. x 0.255″ h. Terminals: **P** only. Resistance Range: Specify 10, 20, 50, 100, 200, 500, 1K, 2K, 10K, 20K or 50K ohms.

### CERMET INFINITE RESOLUTION TYPES

**Series 2305 Microminiature:** Meets MIL-R-22097 style RJ24. Power Rating, ½ watt at 85° C. Resistance Tolerance, ±10%. Temperature Range, −55° C to +150° C. Temperature Coefficient†, ±150 ppm/° C. Adjustment, 26 turns. Size: Same as Series 2300. Terminals: **P, W** or **X.** Standard Resistances: Specify 20, 50, 100, 200, 500, 1K, 2K, 5K, 10K, 20K, 25K, 50K, 100K, 250K, 500K or 1 megohm.

**Series 2855 High Temperature:** Meets MIL-R-22097 style RJ11. Power Rating, ¾ watt at 85° C. Resistance Tolerance, ±10%. Temperature Range, −55° C to +150° C. Temperature Coefficient†, ±150 ppm/° C. Adjustment, 22 turns. Size, 0.32″ h. x 0.28″ w. x 1.25″ lg. Terminals: **L, P** or **SL.** Standard Resistances: Specify 100, 200, 500, 1K, 2K, 5K, 10K, 20K, 25K, 50K, 100K, 250K, 500K or 1 megohm.

**Series 2905 Subminiature:** Meets MIL-R-22097 style RJ22. Power Rating, ½ watt at 85° C. Resistance Tolerance, ±10%. Temperature Range, −55° C to +150° C. Temperature Coefficient†, ±150 ppm/° C. Adjustment, 25 turns. Size, Same as Series 2900. Terminals: **L, P, W, X** or **Y.** Standard Resistances: Specify 100, 200, 500, 1K, 2K, 5K, 10K, 20K, 25K, 50K, 100K, 250K, 500K, 1 meg, 2.5 megs, 5 megs or 10 megs.

**Series 3815* Microminiature:** Solvent resistant. Power Rating, ¾ watt at 40° C. Resistance Tolerance, ±10%. Temperature Range, −55° C to +125° C. Temperature Coefficient†, ±150 ppm/° C. Adjustment, 22 turns. Size, 0.31″ h. x 0.16″ w. x 0.75″ lg. Terminals: **P** or **K.** Standard Resistances: Specify 50, 100, 200, 500, 1K, 2K, 5K, 10K, 20K, 50K, 100K or 500K ohms.

**Series 6034 Microminiature:** Power Rating, ½ watt at 85° C. Resistance Tolerance, ±10%; ±5% available on request. Temperature Range, −55° C to +125° C. Temperature Coefficient, ±100 ppm/° C. Adjustment, 15 turns. Size, 0.20″ h. x 0.16″ w. x 0.75″ lg. Terminals: **P, K** or **Y.** Standard Resistances: Specify 100, 200, 500, 1K, 2K, 5K, 10K, 20K, 50K, 100K, 200K, 500K or 1 megohm.

**Series 6203 Microminiature:** Power Rating, ¼ watt at 85° C. Resistance Tolerance, ±20%. Temperature Range, −25° C to +125° C. Temperature Coefficient, ±100 ppm/° C. Adjustment, single turn. Size, 0.22″ h. x 0.25″ dia., P; 0.33″ h. x 0.26″ w. x 0.26″ lg., X. Terminals: **P** or **X.** Standard Resistances: Specify 100, 200, 500, 1K, 2K, 5K, 10K, 20K, 50K, 100K, 200K, 500K or 1 megohm.

**Series 6905 Subminiature:** Power Rating, ½ watt at 40° C. Resistance Tolerance, ±10%. Temperature Range, −55° C to +125° C. Temperature Coefficient†, ±150 ppm/° C. Adjustment, Single turn. Size, 0.500″ dia. x 0.255″ h. Terminals: **P** only. Resistance Range: Specify 20, 50, 100, 200, 500, 1K, 2K, 5K, 10K, 20K, 25K, 50K, 100K, 200K, 500K, 1 meg, 2 megs, 2.5 megs or 5 megs.

*For Vista-Trim view top, use suffix **-2,** (e.g., 3815P-100-2).
†±100 ppm/° C also available in 1K and up resistance values.

### HOW TO ORDER

**3815** **P** **-100** **-2**
Ⓐ Ⓑ Ⓒ Ⓓ

Ⓐ Series Number.

Ⓑ Terminal type; select from types indicated as available for particular series. See previous page for explanation of terminal types.

Ⓒ Resistance code. First two digits are significant figures of resistance; last digit is number of zeroes that follow (e.g., **100** is 10 ohms, **504** is 500K ohms).

Ⓓ Add **-2** suffix only when ordering Vista-Trim view top on series that offer this option.

### FILM-MET™ INFINITE RESOLUTION TYPES

**Series 2301 Microminiature:** Power Rating, ½ watt at 85° C. Resistance Tolerance†, ±10%. Temperature Range, −55° C to +150° C. Temperature Coefficient, ±50 ppm/° C. Adjustment, 26 turns. Size: P, W or X, same as Series 2300. Terminals: **P, W** or **X.** Standard Resistances: Specify 10, 20, 50, 100, 200, 500, 1K, 2K, 5K, 10K or 20K ohms.

**Series 2851 High Temperature:** Power Rating, ¾ watt at 85° C. Resistance Tolerance†, ±10% Temperature Range, −55° C to +150° C. Temperature Coefficient, ±50 ppm/° C. Adjustment, 22 turns. Size, 0.32″ h. x 0.28″ w. x 1.25″ lg. Terminals: **L, P** or **SL.** Standard Resistances: Specify 20, 50, 100, 200, 500, 1K, 2K, 5K or 10K ohms.

**Series 2901 Subminiature:** Power Rating, ¾ watt at 85° C. Resistance Tolerance†, ±10%. Temperature Range, −55° C to +150° C. Temperature Coefficient, ±50 ppm/° C. Adjustment, 25 turns. Size: L, P, W, X or Y same as Series 2900. Terminals: **L, P, W, X** or **Y.** Standard Resistances: Specify 50, 100, 200, 500, 1K, 2K, 5K or 10K ohms.

**Series 3811* Microminiature:** Solvent resistant. Power Rating, ¾ watt at 40° C. Resistance Tolerance†, ±10%. Temperature Range, −55° C to +125° C. Temperature Coefficient, ±50 ppm/° C. Adjustment, 15 turns. Size, 0.31″ h. x 0.16″ w. x 0.75″ lg. Terminals: **P** or **K.** Standard Resistance: Specify 50, 100, 200, 500, 1K, 2K, 5K, 10K or 20K ohms.

## TEN-TURN PRECISION MICROPOTS

**Model 205:** Bushing mount. Power Rating, 5 watts max. at 40° C. Temperature Range, −55° C to +105° C. Linearity Tolerance (Zero-Based), ±0.1%. Resistance Tolerance, ±10% below 50 ohms; ±3%, 50 ohms and above. Size, 1¾″ dia. x 2⅛″ lg.; ¼″ dia. shaft. Standard Resistance: Specify 1.15, 2.9, 25, 50, 100, 200, 500, 1K, 2K, 5K, 10K, 20K, 30K, 50K or 100K ohms.

**Model 2101B:** Bushing-servo mount. Power Rating, 5 watts max. at 40° C. Temperature Range, −55° C to +125° C. Linearity Tolerance, ±0.25%. Resistance Tolerance, ±5%, 25 and 50 ohms; ±3%, 100–100K ohms; ±5%, 120K ohms. Size, ⅞″ dia. x 1.448″ lg., bushing; ⅞″ dia. x 1.573″ lg., servo; ⅛″ dia. shaft. Standard Resistance: Specify 25, 50, 100, 200, 500, 1K, 2K, 5K, 10K, 20K, 30K, 40K, 50K, 100K or 120K ohms.

**Model 2151B:** Bushing mount. Power Rating, 3 watts max. at 40° C. Temperature Range, −55° C to +105° C. Linearity Tolerance, ±0.25%. Resistance Tolerance, ±3%. Size, ⅞″ dia. x 1.455″ lg.; ¼″ dia. shaft. Standard Resistance: Specify 100, 500, 1K, 5K, 10K, 20K, 30K, 50K or 100K ohms.

**Model 2161B:** Same as Model 2151B, except bushing-servo mtg.; ⅛″ dia. shaft.

**Model 2201B:** Bushing mount. Power Rating, 5 watts max. at 40° C. Temperature Range, −55° C to +105° C. Linearity Tolerance, ±0.5% below 100 ohms, ±0.25%, 100–100K; ±0.5%, 200K. Resistance Tolerance, ±5%, 25 and 50 ohms; ±3%, 100–100K; ±5%, 200K. Size, 1¹³⁄₁₆″ dia. x 2⅛″ lg.; ¼″ dia. shaft. Standard Resistance: Specify 25, 50, 100, 200, 500, 1K, 2K, 5K, 10K, 20K, 30K, 50K, 100K or 200K ohms.

**Model 2251B:** Bushing mount. Power Rating, 5 watts max. at 40° C. Temperature Range, −55° C to +105° C. Linearity Tolerance, ±0.5% below 100 ohms; ±0.25%, 100–100K; ±0.5%, 200K. Resistance Tolerance, ±5%, 25 and 50 ohms; ±3%, 100–100K; ±5%, 200K. Size, 1¹³⁄₁₆″ dia. x 2⅛″ lg.; ¼″ dia. shaft. Standard Resistance: Specify 25, 50, 100, 500, 1K, 2K, 5K, 10K, 30K, 50K, 100K or 200K ohms.

**Model 4101B:** Bushing mount. Power Rating, 2 watts max. at 40° C. Temperature Range, −55° C to +125° C. Linearity Tolerance, ±0.25%. Resistance Tolerance, ±5%. Size, ⅞″ dia. x 1.182″ lg.; ¼″ dia. shaft. Standard Resistance: Specify 100, 200, 500, 1K, 2K, 5K, 10K, 20K, 50K or 100K ohms.

**Model 4301B:** Bushing-servo mount. Power Rating, 3 watts at 40° C. Temperature Range, −55° C to +105° C. Linearity Tolerance, ±0.25%. Resistance Tolerance, ±5%. Size, ⅞″ dia. x 1.455″ lg.; ¼″ dia. shaft. Standard Resistance: Specify 20, 50, 100, 200, 500, 1K, 2K, 5K, 10K, 20K, 50K or 100K ohms.

**Model 4401B:** Bushing mount. Power Rating, 5 watts at 40° C. Temperature Range, −55° C to +105° C. Linearity Tolerance, ±0.5% below 100 ohms; ±0.25%, 100–100K ohms. Resistance Tolerance, ±5%. Size, 1¹³⁄₁₆″ dia. x 2⅛″ lg.; ¼″ dia. shaft. Standard Resistance: Specify 25, 50, 100, 200, 500, 1K, 2K, 5K, 10K, 20K, 50K or 100K ohms.

**Model MF-78:** Bushing mount. Power Rating, 2 watts at 40° C. Temperature Range, −55° C to +85° C. Linearity Tolerance, ±0.2%. Resistance Tolerance, ±3%. Size, ⅞″ dia. x 1¼″ lg.; ¼″ dia. shaft. Standard Resistance: Specify 100, 200, 500, 1K, 2K, 5K, 10K, 20K, 50K, 100K or 125K ohms.

## THREE-TURN PRECISION MICROPOT

**Model 205-3T:** 3-turn precision Micropot. Bushing mount. Power Rating, 3 watts at 40° C. Temperature Range, −55° C to +105° C. Linearity Tolerance, ±0.5%, zero-based. Resistance Tolerance, ±10%, 10 ohms; ±3%, 50–50K ohms. Size, 1¾″ dia. x 1³¹⁄₆₄″ lg.; ¼″ dia. shaft. Standard Resistance: Specify 10, 50, 100, 500, 1K, 5K, 10K, 20K, 30K or 50K ohms.

**Model 2131B:** Bushing-servo mount. Power Rating, 4 watts at 40° C. Temperature Range, −55° C to +125° C. Linearity Tolerance, ±0.5%. Resistance Tolerance, ±5%, 10–30 ohms; ±3%, 100–50K. Size, ⅞″ dia. x 0.930″ lg. bushing; ⅞″ dia. x 1.055″ lg., servo; ⅛″ dia. shaft. Standard Resistance: Specify 10, 30, 100, 200, 300, 500, 1K, 2K, 3K, 5K, 10K, 20K, 30K or 50K ohms.

## CONCENTRIC SCALE MICRODIALS®

**Type 1350:** Ten-turn concentric scale increment dial has 100 divisions; turns-counting dial numbered 0–10. Extra-large outer vernier dial and foolproof turns dial for readout accuracy of 1000:1. Smooth epicyclic gear movement. Zero backlash. Fingertip brake. Clear anodized aluminum finish. Size, 1¹¹⁄₁₆″ dia. x 1″ deep. For ¼″ dia. shafts.

**Type 1370:** Same as Type 1350, except size only ⅞″ dia. x .898″ deep. For ¼″ dia. shafts.

**Type DFA:** Ten-turn dial has 1000:1 indexing accuracy; couples directly to potentiometer shaft, hence no backlash. Single numeral in window above the knob indicates completed turns of shaft. Available in satin chrome finish **DFA-N** or with white numbers on black finish **DFA-NB.** Size, 1.06″ w. x 1.25″ h. (1.63″ h. with lock lever).

## DIGITAL READOUT MICRODIALS

**Type 1300:** Digital units for fast, accurate readings; indicates precise shaft position up to 1000 turns. Available in 3-digit 10-turn, 4-digit 100-turn, and 5-digit 1000-turn models with counts to 6000 per minute. Optional fingertip brakes. Knurled aluminum knobs; Cycolac* counter wheels. Rugged, dust-sealed case. Continuous rotation. Numbers ³⁄₁₆″ high. *Reg. TM Borg-Warner Corp.

**Type 1380:** Ten-turn dial has 1000:1 indexing accuracy; mounts to ¼″ potentiometer shaft with a single set screw. Control knob mounts directly to shaft to eliminate backlash inaccuracy; on-off brake switch. Available in black finish **1381** or in black with gray hammertone finish **1385.** Size, 1⁷⁄₆₄″ w. x 1.075″ d. x 1⁵¹⁄₆₄″ h.

**Type 3100:** Extremely precise, digital Microdial. Measures 1⅛″ x 1²¹⁄₃₂″ and protrudes only ²⁵⁄₃₂″ from panel. Digits (illumination optional) magnified by convex lens in recessed window. Three-digit 10-turn dial rotates continuously forward and backward with fingertip brake to lock settings. Indexing accuracy, 1000:1. For panels ⅛″ to ⅜″ thick. Natural brush aluminum finish. Illuminated types supplied with 28-volt bulb; optional 6-volt bulb available, specify.

# TRIMPOT® POTENTIOMETERS AND MOUNTING HARDWARE

## PANEL MOUNTED POTENTIOMETERS

### CERMET ELEMENT SINGLE TURN POTENTOMETERS

Single turn potentiometers for panel mounting. Resistance Tolerance: ±10%; ±5% available. Tapers: Linear; 10% CW or 10% CCW. Contact Resistance Variation: ±3% max. of total resistance. TC: ±150 ppm/° C. High Performance Models meet or exceed applicable requirements of MIL-R-94 and MIL-R-23285. **High Performance Model 3852:** Housing ¾" dia. x ¼" lg. Resistance Range: 50 ohms to 5 megs, linear taper; 1K to 2.5 megs, CW and CCW taper. Power Rating: 2 watts at 70° C, linear; 1 watt, CW and CCW taper. Operating Temperature: −65° C to +150° C. **Commerical Model 3859:** Same except Operating Temperature Range −65° C to +125° C. **High Performance Model 3862:** Housing ½" dia. by .453" lg. Resistance Range: 100 ohms to 5 megs, linear taper; 500 ohms to 2.5 megs, CW and CCW tapers. Power Rating: 1 watt at 125° C, linear taper; 0.5 watt, CW and CCW taper. Operating Temperature Range: −65° C to +175° C. All models supplied with hardware; other shaft lengths available. Types with locking bushings supplied with lock nut. Specify: Plain round, screwdriver slot, round with flat shaft; solder lugs or PC terminals; resistance; and linear, CW or CCW taper.

*This standard is also the minimum shaft length available for this model. †The shaft length numbering code is based on $\frac{1}{32}$" increments; thus, a 1" long shaft FMS is ordered by code 32.

Shaft lengths other than those listed above are available at no extra charge in ⅛" increments from the minimum in table above to 1½" FMS on all models except 3852A and 3859A which can be obtained with shafts 2" FMS at no extra charge. There is an extra charge for all other shaft lengths.

2: Screwdriver slot. Other shaft endings available.

Solder lug terminals.

## KNOBPOT® BUSHING MOUNT PRECISION POTENTIOMETERS

Knob, readout dial and potentiometer in one package requires less front panel space than most dials alone; requires no back panel space. Self-locking feature provides excellent stability during vibration and shock; 100% contact pressure control insures high mechanical life. Sealed to pass MIL-STD-202, Method 103, humidity. Lockwasher and mounting nut included.

### 10-TURN ¾" DIAMETER KNOBPOT® MODEL 3600 (FIG. C)

Phasing of dial readout to potentiometer performed at factory with accuracy of ±0.5% (including linearity). Power Rating: 1.5 watts at 25° C. Abs. Min. Res.: 1.0 ohm or 0.1%, whichever is greater. Operating Temperature: 85° C max. Resistance Tolerance: ±5%. Size: ¾" dia. x 1" lg. FMS.

### 10-TURN 1¼" DIAMETER DIGITAL KNOBPOT® MODEL 3650 (FIG. F)

Integral digital readout, knob and potentiometer requires less front panel space than most dials alone. Readability of 1 part in 10,000. Output accuracy to 0.1% (including linearity). Repeatability within 0.05% voltage ratio. Silverweld® termination. Power Rating: 2.5 watts at 25° C. Abs. Min. Res.: 1.0 ohm or 0.1%, whichever is greater. Operating Temperature: 85° C max. Resistance Tolerance: ±3%. Size: 1¾" dia. x 2⁹⁄₃₂" lg. FMS. Mounting cup furnished as shown in illustration.

## MINIATURE DECADE BOXES

Each unit consists of a network of five ±1% metal film resistors. Desired value is selected by inserting banana plug in hole adjacent to desired decade digit. Housing is interlocking construction (tongue and groove) interconnecting up to 7 units for a complete range .1 to 999,999.9 ohms in .1 ohm steps. External connections by solder lug and banana plug receptacles; shorting bar (supplied) or dual shorting banana plug for connections between ganged units. **Temp. ### "C LINE®" WIRE-WOUND INDUSTRIAL CONTROLS

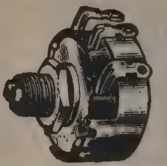
Series 58C2



Series 43C2

Clarostat "C Line" controls are designed primarily for industrial applications. They feature moisture and dust-proof construction, corrosion proof finish and locking or standard bushing. Suffix C1 indicates 1⅝" round shaft beyond bushing and ⅜" long bushing with ⅜-32-NEF-2 thread. Suffix C2 indicates ⅛" screwdriver slotted shaft, ½" split locking bushing. One nickel plated hex mounting nut and internal lock washer supplied with all units. All C2 units supplied with a nickel plated machined hex locking nut. Switches, ohmages not listed, tapers not listed, bushings and shaft lengths not listed, and dual combinations are also available on special order. (Prices and delivery information available on request.)

## CLAROSTAT DECADE BOXES, DIALS AND POTENTIOMETERS

### MODEL 240C PORTABLE DECADE

This resistance decade allows changing resistance at a flip of a switch in a working circuit. Any value can be obtained, from one ohm to 999,999 ohms, in steps of one ohm and at a maximum power rating of 225 watts, using a maximum of 1,000 volts DC or 660 volts AC. Clarostat "Greenohm" resistors are used throughout. These are inorganic-cement-coated, wire-wound power resistors. The resistors are mounted on rigid metal supports; a baffle plate separating the resistor bank from the switch assembly protects the latter against heat. Resistance changing switches are of the type that prevents a resistance breakdown between steps, thus protecting delicate meters and measuring instruments in the circuit. Pointer knobs indicate at a glance the resistance value being used.

**Resistance Tolerance:** ±2.0% all decades except No. 1, ±5.0%. **Max. Current:** 5 amps, No. 1; 1.5 amps, No. 2; 0.5 amp, No. 3; 0.15 amp, No. 4; 0.05 amp, No. 5; 0.005 amp, No. 6.
In a heavy gauge metal case, finished in frosted gray wrinkle, with an etched black-and-aluminum front panel. Overall length, 13″; 8½″ deep; 5¾″ high. Weight, 11.5 lbs.

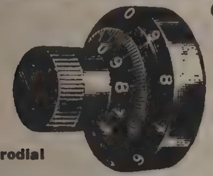
## CLARODIALS—10-TURN CONCENTRIC SCALE DIALS



**Clarodial**

Calibrated dials designed for multi-turn potentiometers up to ten turns or other rotary devices. Requires only one inch of panel space. Knob attaches directly to the shaft, and the body of the dial is mounted rigidly to the panel. Therefore, accurate readings with a ratio of 1000 to one for 10 turns are provided with zero backlash and no reading error. Made of anodized aluminum. Mounting requirements: ¼″ shaft and ⅜″-32 NEF-2A bushing. Model 411 is black, has no lock. Model 412 is black, has lock. Model 461 is clear, has no lock. Model 462 is clear, has lock.

## SERIES 62JA TEN-TURN POTENTIOMETER

Opens new application areas for the advantages of multi-turn potentiometer design, including far greater resolution in trimming, better instrument control and settings for all types of electronic equipment. Resistance tolerance, ±5%. Functional output, linear. Absolute linearity, ±0.25%. Power dissipation at 25° C, 2 watts, derated to zero at 85° C. Dielectric strength, 1000 VAC. Electrical and mechanical rotation, 3600°, +10, −0. Maximum torque, 3 oz.-in. Stop strength, 50 oz.-in. Insulation resistance, 1000 megohms. Life, 100,000 shaft revolutions. Max. rotation speed, 60 rpm. Size, ⅞″ dia. x 2½″ overall.

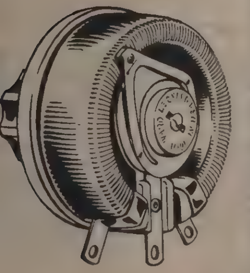
## WARD LEONARD VITREOUS ENAMELED POWER RHEOSTATS



**MP Series.** Compact power rheostats meet MIL-R-22 specifications. Designed with fewer parts, to insure high mechanical strength. Vitreous enamel bonded ceramic construction with self-lubricating contact show, uniform resistance winding, low-resistance contact assembly. Three terminals, for use as potentiometer or rheostat. **Tolerance:** ±10%. **Rotation:** 300°. **MP06** has ⅛″ dia. shaft, mounts on panels up to ⅛″ with ¼-32 bushing and hex nut. **MP10 and MP15** have ¼″ dia. shaft, mount on panels to ¼″ with ⅜-32 bushing and hex nut. All types have no-turn lugs. **R Series.** High power types for commercial use. 100R and 150R have ¼″ dia. shaft with bushing and hex nut; 300R has ⅜″ shaft and requires two 9/32″ dia. mounting holes.

# CTS Trimmer Potentiometers

## MULTI-TURN TRIMMER POTENTIOMETERS

### HOW TO ORDER

CTS trimmer potentiometers and variable resistors are available in the resistance values shown for each series. To order, add 3-digit suffix to basic CTS Type Number (or Military Type Number), to indicate resistance value desired (first 2 digits of this suffix indicate significant numbers; 3rd digit indicates number of zeros). Examples: 190PC101A is a series 190 trimmer with PC terminals, resistance of 100 ohms, ±10% tolerance; 190PC504A is the same trimmer, but 500K ohms.

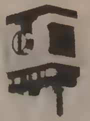
# CTS® TRIMMER POTENTIOMETERS AND VARIABLE RESISTORS

## SINGLE-TURN TRIMMER POTENTIOMETERS AND VARIABLE RESISTORS



220

### SERIES 220 ⅛-WATT, COMPOSITION MINIATURE TRIMMER

iniature trimmer for PC applications. Carbon composition element. Double-wiping, self-cleaning ontactor construction; self-supporting terminals. Only 7/16" x 5/16" x ½" high. **Power Rating:** ⅛ watt t 55° C, derated to zero at 85° C (mounted on PC board). **Maximum Operating Voltage:** 500 VDC. **olerance:** ±20%. **Taper:** Linear. **Rotation Angle:** 300° (±5°). **Shaft:** .156" dia. x 1/16" long, with crewdriver slot.

### SERIES 330 ⅜-WATT, CARBON-CERAMIC TRIMMER

iniature single-turn trimmer, only ½" diameter, with carbon-ceramic element. Humidity controlled, ith excellent stability. Drawn non-ferrous metal case, nickel plated; diallyl phthalate rotor. **Power ating:** ⅜ watt at 70° C, derated to zero at 150° C (mounted on PC board). **Max. Operating Voltage:** 00 VDC. **Tolerance:** ±10%. **Taper:** Linear. **Rotation Angle:** 295° (±5°). **Turning Torque:** 0.5 to 6 n.-oz. **Adjustment:** Screwdriver slot. **Size:** ½" dia. x 13/32" deep, plus terminals. **Terminals:** Standard 100" grid, .028" dia. PC pins with .030" standoffs.

### SERIES 550 2-WATT, ¾" DIAMETER CERMET VARIABLE RESISTORS

anel-mount controls offer high stability and reliability with low noise and long life. Excellent high requency characteristics, and overload capacity. Closed construction. Molded diallyl phthalate base ith molded-in terminal inserts. Terminals electrically bonded to termination pad. Infinite resolution. **ower Rating:** 2 watts at 70° C, derated to zero at 150° C. **Max. Operating Voltage:** 500 VDC. **Tolerance:** ±10% (1 meg, ±20%). **Taper:** Linear. **Rotation Angle:** 280° (±5°). **Size:** ¾" dia. x ½" deep, plus shaft .250" dia. shaft); locating lug .344" from center. **Mounting:** Bushing (⅜-32).

# CTS® ECONOMY TRIMMERS AND ROTARY SELECTOR SWITCHES

## ECONOMY TRIMMERS

Type 115

Type P115

Type 117

Type U-201

Type X-201

### WIRE-WOUND TYPES 115, P115 AND 117

Fully enclosed, 2-watt trimmers; insulated rotors; long rotational life. Wide resistance range with ±10% tolerance, linear taper and 500 VDC max. Cross slot in nylon rotor for screwdriver adjustment or knob attachment. Has PC type terminals. Rotational angle, 270° ±5°. Type 115, printed circuit mounting; type P115, twist tab mounting; type 117, rivet ear mounting.

### CARBON TYPES U-201 AND X-201

Miniature, ¼-watt carbon trimmers. Snap-in, self-supporting bracket mounted. Has ±20% tolerance, linear taper and 500 VDC max. Blue nylon knob, ¹⁹⁄₃₂" dia., slotted for front or rear screwdriver adjustment. With PC type terminals. Rotation angle, 260° ±5°. Type U-201 mounts with knob parallel to PC board; type X-201 with knob perpendicular to PC board.

## ROTARY SELECTOR SWITCHES

Standard, compact industrial rotary selector switches. Machine molded-in terminals for exact, immovable and permanent position in stator. Molded stator rugged for long life. Soldering heat can't loosen terminals; natural design barrier prevents solder flow into circuit elements. Long life contacts evenly silvered. Double wiping, self-cleaning rotor contacts. Stator contacts integral with terminals. Space saving design. **Detents:** Index plate 30° between positions with one fixed and one adjustable stop. **Finish:** 50-hour salt spray. **Size:** 1¹⁄₁₆" dia. x ³⁵⁄₆₄" th. body through one section; add ¼" space and ³⁄₁₆" section thickness for each additional section. Shaft, 1⅞" l. (from bushing) x ¼" dia. Bushing ⅜"-32 thread, ⅜" long. Mtg. hardware supplied. Glass alkyd resin stator and polycarbonate (Lexan)* rotor. Contacts laminated silver movable type. Terminals and stator are silver-plated brass. Operating temperature, 85° C. *Reg. DuPont trademark.

### SHAFT AND 30° DETENT ASSEMBLIES

**Standard Units:** As described in general data. **Starwheel Units:** Has starwheel detent for extremely long life and minimum turning torque variation. Double lever arm controls torque in both directions of rotation with practically no change in torque during 100,000 cycles of operation through 12 positions.

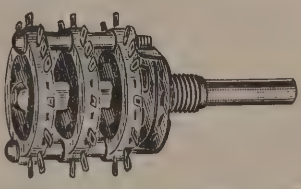
### ATTACHABLE POWER SWITCHES

Reliable AC power switches for use with selector switches. Mount on rear frame of the selector switch, or between wafers using a specially designed bracket. Rated 3 amps, 125 VAC. **No. GC-21:** SPST. **No. VF-21:** SPDT. **No. WF-21:** DPST.



### SEALED SWITCH KITS

**CTS No. SSK-1**—Enclosed detent construction seals both the wafer sections and the detent mechanism of the switch against dust, dirt and moisture.

**CTS No. DSWK-1**—Open detent construction seals, protects wafer sections of selector switch against dust and dirt.

### SHIELDS AND MOUNTING BRACKETS

Shields provide shielding of switch sections from each other. Various size mounting brackets handle all mounting requirements.

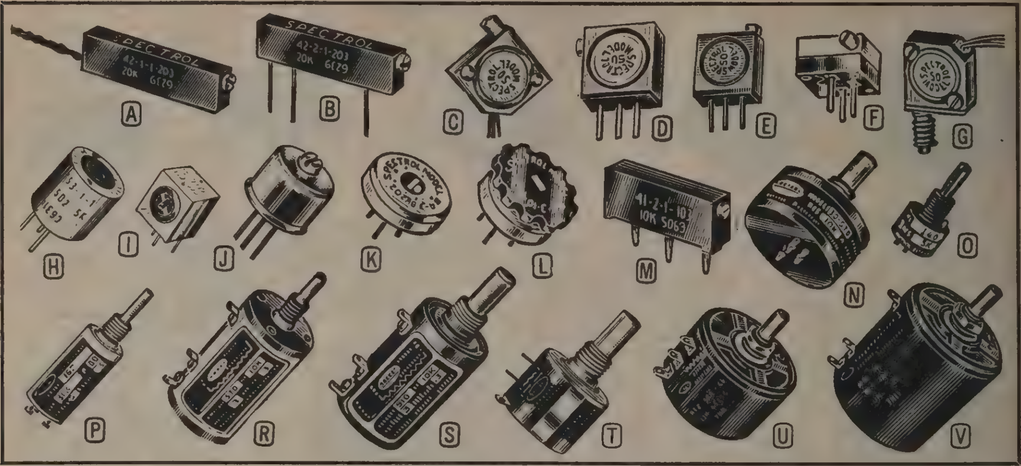
# Spectrol Trimmer Potentiometers



## TRIMMER POTENTIOMETERS

Meet applicable portions of MIL-R-27208 (except Models 94 and 949) and MIL-R-22097B for Models 53 and 62, plus the following specifications: **End Resistance:** Models 53, 62, 78 and 949, 1% $R_T$ or 2 ohms, whichever is greater; all others, 2% $R_T$ or 1 ohm, whichever is greater. **Temperature Coefficient:** Models 41, 53, 62, 78 and 949 to 100 ppm/° C, depending on res.; Model 94, 100 ppm/° C; all others, 50 ppm °/C. **Noise:** Model 74, 1K; all others, 100 ohms equivalent peak noise during adjustment. **Moisture Resistance:** Resistance change: Model 53, ±5%; Model 62, sealed to permit cleaning with solvents; all others, ±(1% +0.05 ohm); insulation resistance, not less than 10 megohms. **Insulation Resistance:** Model 94, 500 megohms; Models 62, 78 and 949, 100 megohms; all others, 1000 megohms. **Vibration:** 30 G to 2 kHz. **Shock:** Model 80, 50 G for 11 msec; Model 949, not specified; all others, 100 G for 11 msec. **Load Life:** 1000 hours.

### HOW TO ORDER

Numbers shown are stock types.

**Prefix:** Indicates Model (e.g., **42**-1-1).

**First Suffix:** Indicates terminals (e.g., 42-**1**-1); **-1,** Teflon* insulated stranded 12″ leads (Models 53 and 62, round configuration with PC pins 180° from shaft head); **-2,** PC pins 90° from shaft head (Model 41, PC pins .100″ side spread); **-3,** PC pins 180° from shaft head (Model 41, PC pins .200″ side spread); **-4,** PC pins from base, horizontal mounting (Model 41, PC pins .100″ side spread, RJ11); **-5,** solder hooks 180° from shaft.

**Second Suffix:** Defines shaft and other features (e.g., 42-1-**1**): **-1,** slotted fillister head shaft (Model 53, slotted screwdriver shaft with stops), (Model 62, std. ±20% R.T. tol.); **-8,** 23-turn .083″ dia. shaft, stops, clutch and color-coded leads (Model 84, screwdriver adjust); **-10,** MIL version equivalent per separate price table (Model 84, knob adjust); **-11,** stops and clutch, slotted fillister head shaft.

**Final Suffix:** Specify resistance desired (e.g., 42-1-1-**100**), per EIA table below within range listed (per table on following page).

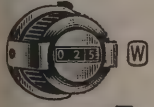
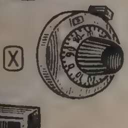
## PRECISION TURNS-COUNTING MULTIDIALS®



W

### MODEL 25 DIGITAL DIAL (FIG. W)

Displays large, well-defined digital readout in the viewing window. Choice of 3-wheel dial (reads to 1099 in 11 turns) or 4-wheel dial (reads to 9999 in 100 turns). Fine calibrations allow setting to within .33° accuracy. Two to one gear ratio between setting knob and device shaft allows extremely fine settings. Available for ¼" dia. shaft. Mounts directly to shaft with only two No. 4-40 hex set screws. Chrome plated metal parts; black plastic knob. Dia., 1¹³⁄₁₆".



X

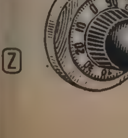
### MODEL 11 TURNS-COUNTING DIAL (FIG. X)

Accuracy of better than 0.1%. Each turn of shaft is indicated in precise increments of 1/100; each turn is totalled in easy-reading window. Locks with a finger-touch; releases easily. Ten turns. Available for ¼" and ⅛" shafts. Dia., 1"; protrusion from panel, ⅞". Satin chrome.

Y

### NEW MODEL 15 TURNS-COUNTING DIAL (FIG. Y)

Multidial registers a total count of 999; left counter indicates completed revolutions of drive sleeve; other two indicate percent of a partial revolution; graduation lines .060" long plus four intermediate lines .040" long between numerals. Clockwise rotation. White numerals .130" h. x .080" wide on black background. Dial accuracy (including backlash), both directions, within one graduation line (.02% full range). Precision 10-turn dial with 1/500-turn minor scale division. Knob, bezel and base in matte black plastic; satin-chromium plated cover. Size, 1.0" w. x 1.95" h. x 1.0" deep from mtg. surface including knob.



Z

### MODEL 21 TURNS-COUNTING DIAL (FIG. Z)

Multidial registers a total count of 1499; number in center of window (0 thru 14) indicates completed number of turns of the drive sleeves. Graduated circular dial indicates the percent of a partial turn of drive sleeve. Numerals 0.013" w. x 0.090" h., counter wheels; 0.018" w. x 0.109" h., graduated dial. Precision 15-turn dial with 1/100-turn minor scale division. Base and graduated dial satin chrome plated; turning knob and brake lever knob black plastic; numerals and index marks black. Size, 1¹³⁄₁₆" dia. x 1.0" d.

### SERIES 500

### COMMERCIAL/INDUSTRIAL TRIMMERS

Quality performance at lowest cost. Similar appearance to Series 100. Top or side adjust. **Resistance Tolerance:** ±10%. **Power Rating:** 2 watts at 50° C ambient; derate to 0° at +105° C. **Insulation Resistance:** 1000 megs at 500 VDC. **Temp. Coefficient:** ±70 ppm/° C max. **Torque:** 7.5 oz.-in. max. **Temp. Range:** −55° C to +125° C. **Adjustment Ratio:** 1:1. **Dielectric Strength:** 1000 VAC. **Mounting:** Model 500 same as Model 100; 506 same as 106-2. **Standard Stock Values:** 10, 20, 50, 100, 200, 500, 1K, 2K, 5K, 10K, 20K and 50K ohms.

### SERIES 700

### PRECISION SQUARE TRIMMERS

Meets MIL-R-27208 (RT-24) requirements. **Resistance Tolerance:** ±5%. **Power Rating:** ¾ watt at 85° C. **Adjustment Turns:** 21 (±2) total. Screwdriver slot adjustment, fillister head. **Temp. Coef.:** ±50 ppm/° C max. **Size:** ⅜″ sq. **Std. Stock Values:** 10, 20, 50, 100, 200, 500, 1K, 2K, 5K, 10K, 20K and 50K ohms. **Mounting:** 700-10 (RT-24C2P), bottom PC pins; 700-307, pins 90° from adjustment screw; 700-308, pins 180° from adjustment screw.

### SERIES 800

### PRECISION SQUARE TRIMMERS

Appearance similar to above. **Resistance Tolerance:** ±5%. **Power Rating:** 0.6 watt at 70° C. **Adjustment Turns:** 15 (±2) total. Screwdriver slot adjustment, fillister head. **Temp. Coef.:** ±50 ppm/° C max. **Size:** 5/16″ sq. **Std. Stock Values:** 10, 20, 50, 100, 200, 500, 1K, 2K, 5K, 10K and 20K ohms. **Mounting:** Model 800-20, pins 90° from adj. screw; 800-208, pins 180° from adj. screw.

## CIRCUITRIM WIRE-WOUND TRIMMERS (CONT'D)

### SERIES 60 RECTANGULAR TRIMMERS

For commercial and industrial use; rugged mechanical construction. Has brazed multi-wire terminations. **Power Rating:** 1 watt at 70° C; derate to 0 at 125° C. **Temp. Range:** −55° C to +125° C. **Tolerance:** ±10%. **Adjustment Turns:** 22 ±5. **Noise:** 100 ohms max. during adjustment. **Min. Resistance:** 2 ohms or 1% of resistance, whichever is greater. **Torque:** 8 oz.-in. max. **Temp. Coefficient:** ±70 ppm/° C max. **Moisture Resistance:** MIL-STD-202, method 103, cond. A. **Standard Stock Values:** 10, 20, 50, 100, 200, 500, 1K, 2K, 5K, 10K, 20K, 50K.

**Model 60-00**—Teflon* insulated leads.
**Model 60-20**—With staggered PC pins.
**Model 60-201**—Staggered hook terminals.
**Panel Mount Versions**—Available for 60-00 and 60-201 models. To order, add suffix **M** to number (e.g., 60-00**M**); and price adders per pricing table. *Reg. DuPont TM.

### MODELS 910 & 930 MINIATURE RECTANGULAR TRIMMERS

Provides high quality performance in miniature, low cost design. Immersible to withstand normal cleaning operations. Meets MIL-STD-202, Method 103B humidity requirements. Silver brazed terminations; positive wiper drive. **Resistance Tolerance:** ±10%. **Power Rating:** 1.0 watt at 40° C. **Temperature Coefficient:** ±50 ppm/° C nom.; ±100 ppm/° C max. **Insulation Resistance:** 100 megohms min. at 500 VDC. **Operating Temperature:** −65° C to +125° C. **Noise:** 100 ohms max. during adjustment (ENR). **Adjustment Turns:** 20 nom. **Size:** 0.75″ lg. x .16″ w. x .31″ h. **Standard Stock Values:** 10, 20, 50, 100, 200, 500, 1K, 2K, 5K, 10K and 20K ohms. Staggered PC pins.

### MODEL 940 IC PACKAGE WIRE-WOUND TRIMMER

Leadscrew-activated wire-wound trimmer identical in size to popular dual-inline integrated circuit package. Lead screw is flush so trimmer may be automatically assembled in circuits; simplifies PC board layouts and production assembly. **Resistance Tolerance:** ±10%. **Power Rating:** 1 watt at 40° C. **Temperature Coefficient:** ±50 ppm/° C max. **Insulation Resistance:** 1000 megohms at 500 VDC. **Operating Temperature:** −65° C to +150° C. **Noise:** 100 ohms max. during adjustment (ENR). **Adjustment Turns:** 18 nom. **Size:** .760″ lg. x .250″ w. x .200″ h. **Dielectric Strength:** 900 VAC. **Torque:** 8 oz.-in. max. **Standard Stock Values:** 10, 20, 50, 100, 200, 500, 1K, 2K, 5K, 10K, 20K ohms.

## CIRCUITRIM METAL GLAZE TRIMMERS

Same physical configurations as available in IRC wire-wound trimmers, but employ Metal Glaze element. Smooth, tough and long wearing, it provides infinite resolution, higher resistance values and improved reliability. Negligible reactance makes it ideal for high frequency circuits. Gives "set and forget" stability even under severe shock and vibration. For physical size, terminal configurations and adjustment design, compare Metal Glaze trimmers with their equivalent wire-wound types, except Series 170 which has no wire-wound equivalent.

### SERIES 150 AND 160 ROUND TRIMMERS

Specifications same as Series 100 except: **Resistance Tolerance:** ±10% standard; ±5% and ±20% available. **Power Rating:** ¾ watt at 85° C, 0° at 150° C; 300 V max. **Contact Resistance Variation:** 3% or 20 ohms, whichever is greater. **Temperature Coefficient:** ±100 ppm/° C. **Standard Stock Values:** 100, 200, 500, 1K, 2K, 5K, 10K, 20K, 50K, 100K, 200K, 500K ohms, 1 and 2 megohms.

### SERIES 170 ROUND TRIMMERS

Meet MIL-R-22097 Char. C requirements. Screwdriver adjust; .016″ dia. pins; Model 172 vertical mount. **Resis. Tol.:** ±20%; ±10% available. **Power Rating:** 0.5 W at 85° C; 300 V max. **Contact Resis. Variation:** 3% or 3 ohms, whichever is greater. **Temp. Coef:** ±100 ppm/° C max. **Dielectric Strength:** 600 VAC. **Adjustment Turns:** 1 total. **Torque:** 5.0 oz.-in. max. **Size:** Models 170, 171, .250″ dia. x .145″ thk.; Model 172, .312″ h. x .187″ d. x .250″ w. **Standard Stock Values:** 10, 20, 50, 100, 200, 500, 1K, 2K, 5K, 10K, 20K, 50K, 100K, 200K, and 500K ohms 1 meg.

### SERIES 255 SQUARE TRIMMERS

Specifications similar to Series 205 wire-wound trimmers. Meets all environmental and life requirements of MIL-R-22097, Char. C, RJ-22. **Resistance Tolerance:** ±10% standard; ±5% and ±20% available. **Power Rating:** 1 watt at 70° C, 0° at 150° C; 300 V max. **Insulation Resistance:** 1000 megs at 500 VDC. **Dielectric Strength:** 900 VAC. **Adjustment Turns:** 24 (±2) total. **Torque:** 5.0 oz.-in. max. **Temperature Coefficient:** ±100 ppm/° C max. **Temperature Range:** −55° C to +150° C. **Standard Stock Values:** 10, 20, 50, 100, 200, 500, 1K, 2K, 5K, 10K, 50K, 100K, 200K, 500K ohms, 1 and 2 megohms.

### SERIES 450 (RJ12) & 650 (RJ11) RECTANGULAR TRIMMERS TO MIL-R-22097 CHARACTERISTIC C

Specifications similar to Series 400 wire-wound trimmers. Meets or exceeds requirements of MIL-R-22097, Characteristic C **Resistance Tolerance:** ±10% standard; ±20% available. **Power Rating:** ¾ watt at 85° C; zero at 150° C; 300 V max. **Contact Resistance Variation:** 20 ohms or 3% of resistance, whichever is greater. **End Resistance:** 2 ohms max. **Torque:** 0.1 to 8.0 oz.-in. **Temperature Coefficient:** ±150 ppm/° C max. **Standard Stock Values:** 10, 20, 50, 100, 200, 500, 1K, 2K, 5K, 10K, 20K, 50K, 100K, 200K, 500K ohms and 1 megohm.

**Model 450-00 (RJ-12L)**—Teflon insulated leads. Size, 1.25″ lg. x .190″ w. x .315″ h.
**Model 450-10 (RJ-12P)**—Same, with inline PC pins.
**Model 450-20 (RJ-12Y)**—Same, staggered PC pins.
**Model 650-00 (RJ-11CL)**—Teflon insulated leads. Size, 1.25″ lg. x .275″ w. x .315″ h.
**Model 650-20 (RJ-11CP)**—Same, staggered PC pins.

### SERIES 550 COMMERCIAL/INDUSTRIAL TRIMMERS

Low-cost Metal Glaze ½″ round trimmers similar to Series 500. **Resistance Tolerance:** ±30%. **Power Rating:** ½ watt at 70° C. **Adjustment Turns:** 1. **Temperature Coefficient:** ±150 ppm/° C max. **Dielectric Strength:** 1000 VAC. **Torque:** 7.5 oz.-in. max. **Standard Stock Values:** 10, 20, 50, 100, 200, 500, 1K, 2K, 5K, 10K, 20K, 50K, 100K, 200K, 500K ohms, 1 and 2 megohms.

## CIRCUITRIM METAL GLAZE TRIMMERS (CONT'D)

### SERIES 750 SQUARE TRIMMERS

Similar to Series 700 wire-wound trimmers. Meets MIL-R-22097, Char. C requirements. **Resistance Tolerance:** ±10% standard; ±20% available. **Power Rating:** ½ watt at 85° C, 0° at 150° C; 300 V max. **Adjustment Turns:** 19 (±2) total. **Temperature Coefficient:** ±100 ppm/° C max. **Standard Stock Values:** 10, 20, 50, 100, 200, 500, 1K, 2K, 5K, 10K, 20K, 50K, 100K, 200K, 500K ohms and 1 megohm.

**Model 750-10 (RJ-24P)**—With bottom PC pins.
**Model 750-307**—Pins 90° from adjustment screw.
**Model 750-308**—Pins 180° from adjustment screw.

### SERIES 850 SQUARE TRIMMERS

Similar to Series 800 wire-wound trimmers. **Resistance Tolerance:** ±10% std.; ±20% available. **Power Rating:** 0.3 watt at 70° C; 300 V max. **Adjustment Turns:** 13 (±2) total. Edge PC pins. **Temp. Coef:** ±100 ppm/° C. **Std. Stock Values:** 100, 200, 500, 1K, 2K, 5K, 10K, 20K, 50K, 100K, 200K, 500K ohms and 1 meg.

**Model 850-20**—Pins 90° from adjustment screw.
**Model 850-208**—Pins 180° from adjustment screw.

### SERIES 960/980/989 RECTANGULAR MINIATURE TRIMMERS

Similar to Model 910 wire-wound trimmers. Meet MIL-STD-202, Method 103B, Condition A humidity requirements. Staggered PC pins. **Resistance Tolerance:** ±10%. **Power Rating:** ¾ watt at 40° C. **Temperature Coefficient:** ±100 ppm/° C max. **Stock Values:** 10, 20, 50, 100, 200, 500, 1K, 2K, 5K, 10K, 20K, 50K, 100K, 200K, 500K ohms, 1 megohm.

### SERIES 990 IC PACKAGE

Similar to Model 940 wire-wound trimmers. **Resistance Tolerance:** ±10%. **Power Rating:** ½ watt at 85° C, 300 V max. **Adjustment Turns:** 18 nom. **Temperature Coef.:** ±100 ppm/° C max. **Temp. Range:** −65° C to +150° C. **Std. Stock Values:** 10, 20, 50, 100, 200, 500, 1K, 2K, 5K, 10K, 20K, 50K, 100K, 200K, 500K ohms and 1 megohm.

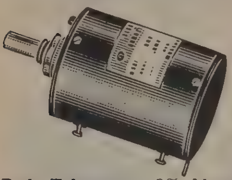
# Potentiometers, Dials

## PRECISION POTENTIOMETERS

Single-turn and multi-turn potentiometers include types for practically every precision requirement. Incorporate numerous design and construction features. Offers exceptional reliability.

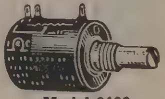
### TYPE HD-150 TEN-TURN POTENTIOMETER



Precision wire-wound pot combines reliability, ruggedness and small size. Gold alloy contacts running on coin silver are used for the common contacts and either a high palladium-platinum or a gold-silver alloy is used as the resistance element contactor. Supplied with black, mirror finish, grade XX phenolic case and end assembly. Dielectric strength is in excess of 900 volts rms, AC at 60 Hz across terminals and shaft. **Turns:** 10. **Resis. Tolerance:** ±3%. **Linear Tolerance:** ±0.25%. **Power Rating:** 5 watts at 40° (derated to zero at 100° C). **Torque:** 2 oz.-in. max. **Temperature Range:** −55° C to +100° C. **Diameter:** 1½". **See Table• for Standard Stock Values.**

### COMMERCIAL/INDUSTRIAL
### MODELS 8400 AND 8500 TEN-TURN POTENTIOMETERS

- **Excellent replacement or design-in pot for commercial industrial application**
- **Silver-brazed termination for rugged, dependable construction**
- **Withstands shocks up to 50 G**



Model 8400

Miniature, wire-wound potentiometer for commercial or industrial uses. Precision molded nylon housing and end plates. Precious metal wiper for long life; hard gold-plated center terminal contact. Long 20" winding provides high resolution, low temperature coefficient. Ribbon-welded, multi-wire terminals give low end resistance. **Turns:** 10. **Resistance Tolerance:** ±5%. **Linearity Tolerance:** ±0.25%, independent. **Power Rating:** 3 watts at 70° C ambient; derate to zero at 105° C. **Torque:** 1 oz.-in. max. **Dielectric Strength:** 1000 VAC. **Temperature Range:** −55° C to +105° C. **Size:** ⅞" dia. x 1⅛" d. behind panel. **See Table• for Standard Stock Values.**

**IRC No. 8400**—Bushing ⅜"-32 NEF-2A thread ¼" long. Shaft ¼" dia. x ½" lg. with screwdriver slot.

**IRC No. 8500**—Bushing ¼"-32 NEF-2A. Shaft .124" dia. x ½" lg. with .030" w. x .045" d. screwdriver slot.

### MODELS 8403 AND 8503 THREE-TURN POTENTIOMETERS

Similar to 8400 and 8500 but 3 turns. **Power:** 2 watts at 40° C. **Resistance Tol.:** ±5%. **Standard Linearity:** ±0.5%. **Length:** 4 1/64". **See Table• for Standard Stock Values.**

### TEN-TURN

Provide an accurate resistance element in a case only ½" in diameter. Resistance element wound on insulated copper core with provision-drawn wire of highest quality. Bushings of half-hard brass threaded ⅜"-32 NEF, ½" long standard. Nickel-plated brass cases and shaft. **Temperature Range:** −65° C to +125° C. **See Table• for Standard Stock Values.**

### SINGLE TURN TYPES

For panel mount applications involving severe environmental or high temperature conditions. Will handle power requirements up to 3.5 watts. For all types, moisture sealed construction is available. Torque, starting and running is 2 oz.-in. maximum. Nickel-plated brass housing. **Power Rating:** (At 40° C) Model 151, 3.5 watts; Model 7501, 2.25 watts; Model 5001, 2 watts. **Temperature Range:** Model 151, −65° C to +150° C (derating to zero at +150° C); Models 7501 and 5001, −65° C to +150° C (derating to zero at +150° C). **See Table• for Standard Stock Values.**

## REVODEX® MULTI-TURN POTENTIOMETER DIALS

Used to obtain or indicate a setting on multi-turn devices of ten turns or less. Especially suited to IRC three, five and ten turn precision potentiometers. The 1⅞" diameter models give a direct reading of the three digits. Dials read from 000 to 999. Virtually no backlash. A locking device is standard on 1⅞" models, optional on 1" dials.

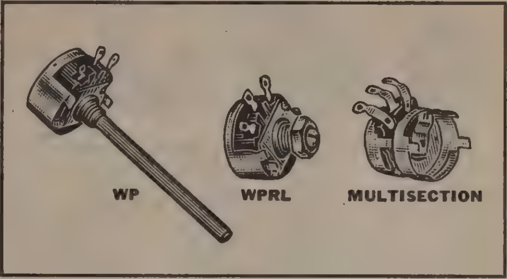
### •EXPLANATION OF TAPERS

Q, RQ and RQL Tapers: New number (1, 2, etc.) replaces old etter system (A, B, C, etc.). Both are shown for replacement onvenience. **1, A** or **2, A**—For potentiometers or rheostats where niform resistance change is required. **3, C**—Left-hand logarithmic aper for audio circuit control. **23, D** or **4, Q**—Right-hand semiogarithmic for use in contrast picture control circuits. Taper 4 lso for stereo tone and balance control. WP, WPRL and 5 W apers: **L**—Left-hand taper for TV focus circuits. **U**—For poentiometer or rheostat where uniform resistance change is equired.



Ideal for every commercial use with the advantages of fine quality and fast, local distributor delivery. Electrical rotation of these controls is the same with or without a switch. Bushing is cast aluminum. Terminals are heavily tinned for easy soldering; may be bent without control becoming noisy. Supplied as single controls. Dual tandem control combinations are readily available by the addition of IRC multisections.

**Type WP:** Wire-ground industrial control with ⅜-32 threaded bushing ⅜" lg. Full round ¼" dia. shaft approx. 3" lg. from mounting face. Linear taper. Tolerance, 10%. For 2, 3, 4 and 5 W requirements. Control 1⁵⁄₁₆" dia. x ⅜" d.

**Type WPRL:** Wire-wound industrial control with short, screwdriver slot shaft ¼" dia.; approx. ½" long from mounting face; ⅜" locking type bushing with nut. Linear taper. Tolerance, ±10%. For 2, 3, 4 and 5 W requirements. Control 1⁵⁄₁₆" dia. x ⅜" d.

**Type WM:** 5-watt, rear control multisections. When added to WP or WPRL single controls supply a wide selection of tandem dual controls. WM multisections do not operate power switches.

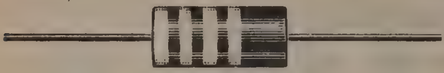
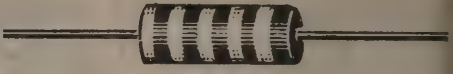
# ALLEN-BRADLEY HOT-MOLDED FIXED COMPOSITION RESISTORS



Style RC



Style RCR

## INDUSTRIAL GRADE AND MIL-R-11 STYLE RC

Allen-Bradley hot molded fixed composition resistors are high quality units for general purpose use. Small size, uniformity, ruggedness and moderate cost make them equally useful in military, industrial, and consumer product applications. Permanent color coding. Meet all requirements for MIL-R-11. Minimum resistance under MIL spec is 2.7 ohms for ¼, ½, and 1 watt; 10 ohms for ⅛ watt and 2 watts. Meet salt water and high humidity requirements. Unexcelled for low noise level. Can be used at full wattage ratings at 70° C ambient temperature.

## MIL-R-39008 STYLE RCR

Allen-Bradley hot molded fixed composition resistors meet all requirements for MIL-R-39008. Style RCR resistors have established reliability to the "S" level or 0.001% failure rate per 1,000 hours. Failure rate level symbolized on resistor by means of fifth color band; e.g., "S" = yellow. Can be used at full wattage ratings at 70° C ambient temperature.

## REEL-PACKAGED FIXED COMPOSITION RESISTORS

Allen-Bradley resistors are available in both body taped and double-lead taped reels at additional charge as indicated; charge for the reel is the same whether or not the reel is full. Quantities available only in multiples of 100 pieces above minimum. **Note**—Long-term storage of reel-packaged resistors is not recommended, due to normal adhesive aging.

### STOCK VALUE DECADE

Multiply values listed below by 1, 10, 100, etc. for exact values in desired range. **Tolerance:** ±5% available in all values listed; **boldface values** are also available in ±10%.

Ⓒ Three-digit number represents resistance. First two digits are significant figures, third is number of zeros that follow. **For values less than 10 ohms:** Industrial Grade; substitute **G** for third digit, making desired resistance value the first two digits multiplied by 0.1—e.g., **27G** = 2.7 ohms; for MIL-R-11 and MIL-R-39008 substitute **R** for decimal point—e.g., **2R7** = 2.7 ohms.

Ⓓ Tolerance: Code for ±5% is **5** for Industrial Grade, **J** for MIL types; ±10% is **1** for Industrial Grade, **K** for MIL types.

Ⓑ For MIL types only; maximum ambient temperature and resistance-temperature characteristic per MIL-R-11 or MIL-R-39008. At 70° C maximum ambient operating temperature, 100% rated wattage can be dissipated.

**Resistance-Temperature Characteristic per MIL Spec**

## GLASS TIN OXIDE, FLAME PROOF, LOW POWER RESISTORS

FP style resistors are specially suited for circuitry where functions, environments and duty cycles demand low-power resistors with exceptional frequency characteristics, low end cost and the ability to withstand overloads. Under extreme overloads up to 100 times rated power the FP resistor will open but will not exhibit any flame. Change in resistance will not exceed ±0.5% when tested per MIL-R-22684B. Average change due to normal soldering is ±0.1% with max. change less than 0.5%. All leads hot tinned to facilitate soldering. Voltage coefficient 0.001%/volt. TC: ±200 ppm/° C, −55° C to +150° C except FP½ and FP1, ±150 ppm/° C. Standard tolerance ±2%, ±5% and ±10%.

## ERIE RESISTORS

### BLUE CHIP® METAL-GLAZE RESISTORS

Require only .03″ in 2″ of board area. Radial lead construction allows easier assembly, both in printed board and many point-to-point wiring applications. Because they are not spiralled to adjust resistance, they have no hot spots and are more reliable. Encapsulated with Jet Seal, a hard glossy polymeric, which protects the resistor mechanically and environmentally. **Tolerance:** 1%. **Working Voltage:** 100 VDC maximum continuous. **Temperature Range:** −55° C to +125° C.

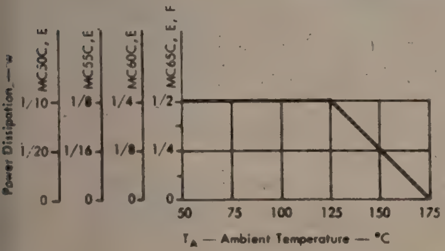
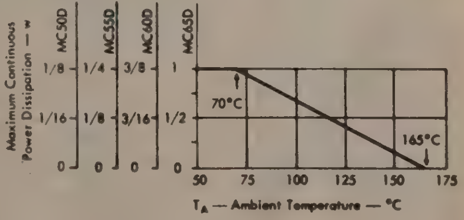
### POWER DISSIPATION DERATING CURVES





### PERFORMANCE CHARACTERISTICS

sistance-value stability is affected by power dissipation in erational-environment tests. Following are two typical exples. In one, the more stable MC series is tested to a lower MIL-R-10509 application demonstrating maximum stability. In the other example, the lower-cost MC—D series is tested at its maximum TI-rated power to demonstrate its excellent stability under these extreme power conditions. Unless otherwise noted, data is percent change from initial resistance.

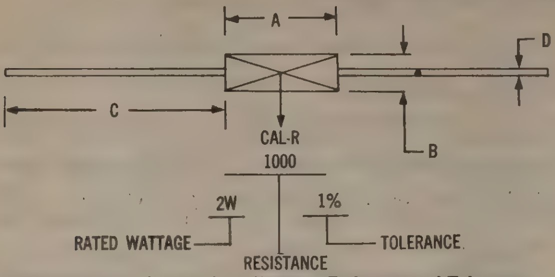
# PRECISION AND POWER RESISTORS

## TYPE SA PRECISION POWER RESISTORS



**When Ordering, Specify Type, Wattage, Resistance and Tolerance**

Meet or exceed applicable requirements of MIL-R-26E and MIL-R-39007. Copperweld* leads standard: Nickel "A" or Alloy 180 available. Core-alumina and steatite ceramics. Silicone coating gives maximum wire protection and extra high resistance to moisture. Inductive types (SA and SAV) are single layer space wound with largest wire permissible. Non-inductive types (SAX and SAVX) feature dual balanced windings for minimum inductance. **Tolerance:** ±5.0% to ±0.01% (±1% standard for off-the-shelf delivery); special matching available to ±0.001% tolerance. **Temperature Coefficient:** 20 ppm/° C standard; up to 5 ppm/° C available. **Dielectric Strength:** Greater than 1000 VAC. **Failure Rate:** Less than .006% per 1000 hours at +25° C with 60% confidence. **Shock Resistance:** SA and SAX types thermal shockproof from −55° to +275° C. SAV and SAVX types, −55° to +350° C. **Stability:** Consistent with tolerance; all parts stabilized in production. Less than 0.1% drift in 2000 hours operation at full wattage rating for 1% tolerance parts.

## TYPE MC POWER RESISTORS

Meet or exceed all requirements of MIL-R-18546D, including "N" characteristic, and MIL-R-39009. Hot tin dipped Copperweld leads for maximum solderability. Completely welded, terminal to terminal. High density extruded aluminum housing provides superior heat conduction; deep finned for maximum heat dissipation under natural and forced convection. High uniformity, single layer space wound, to give maximum core coverage for even heat dissipation. MCX (non-inductive) types have dual balanced windings for minimum inductance. Steatite ceramic core, centerless ground for uniformity. Silicone coated resistance element gives maximum wire protection and extra high resistance to moisture. **Tolerance:** ±5.0% to ±0.05% (±1% standard for off-shelf delivery). **Temperature Coefficient:** 20 ppm/° C standard; up to 5 ppm/° C available. **Dielectric Strength:** Greater than 1000 VAC on MC-100 and MC-250; greater than 2000 VAC on MC-500. **Stability:** Consistent with tolerance; all parts stabilized in production. Less than 0.5% drift in 1000 hours operation at full Cal-R wattage rating for 1% tolerance.

### TYPE T-5 (5 WATTS)

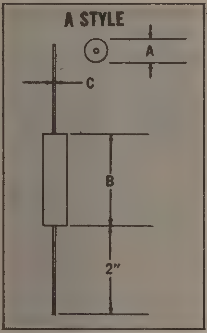
High density extruded aluminum housing offers superior heat conduction; deep finned for maximum heat dissipation. High uniformity, single layer space wound to give maximum core coverage for even dissipation. T-5X (non-inductive) types have dual balanced windings for minimum inductance. Alumina ceramic core, centerless ground for uniformity. Copperweld* leads, hot tin dipped; gold plated Dumet or "A" nickel leads available. **Tolerance:** ±5.0% to ±0.05% (±1% standard for off-shelf delivery). **Temperature Coefficient:** 30 ppm/° C standard; up to 5 ppm/° C available. **Stability:** Less than 0.5% drift in 1000 hours operation at full Cal-R wattage rating for 1% tolerance. All parts stabilized in production. **Dielectric Strength:** Greater than 500 VAC. Weight, 0.8 gram.

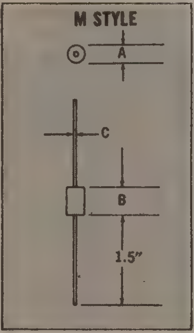
*Registered Copperweld Steel Corp. trademark.

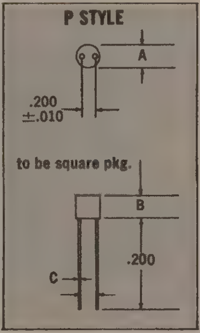
### TYPE T-3 (3 WATTS)

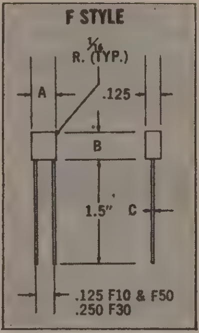
Reverse pie wound, with all pies filled for maximum heat dissipation. Unique recessed end cap isolates winding termination from all lead stress. Protective overcoating covering entire resistor before molding insures maximum protection and secures winding without introducing stress. Resistor element is encased in non-burning epoxy by transfer molding. Copperweld leads, hot tin dipped; gold plated Dumet or "A" nickel available. **Tolerance:** ±1% to ±0.005% absolute; to ±0.002% matching tolerance for matched sets. **Temperature Coefficient:** 10 ppm/° C standard; from 6000 ppm to 2 ppm/° C available. **Stability:** All parts stabilized in production, including 1% parts; components available with stability of .002% per year. **Windings:** Multiple pie reversed type to minimize inductance; special windings available to provide fast rise times. **Working Voltage:** 200 VAC max. Wt., 0.8 gram.

## PRECISION RESISTORS









Meet or exceed all requirements of MIL-R-93C and MIL-R-39005. All pies filled for maximum heat dissipation. Unique recessed end cap isolates winding termination from all lead stress. Terminals welded to end cap for maximum strength; will withstand 15 lbs. linear pull. Double slots tangent to mandrel prevent shorting between pie windings. Protective overcoating covering entire resistor before molding insures maximum moisture protection and secures winding without introducing stress. Hi-temp epoxy, with matching coefficient of expansion between core and case. Leads are hot tin dipped Copperweld, or gold plated annealed Dumet. **Tolerance:** ±1% to ±0.005% absolute; to ±0.002% matching tolerances for matched sets. **Temperature Coefficient:** 10 ppm/° C standard; 6000 ppm to 2 ppm/° C available. **Stability:** Consistent with tolerance; all parts stabilized in production, including 1% parts. Components available with stability of .002% per year. **Windings:** Multiple pie reversed for minimum inductance (except Miniature series); special windings available for low rise times. Special matching available to 0.001% tolerance.

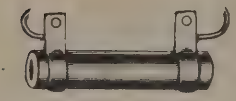
## GREENOHM V™ FIXED POWER RESISTORS



Vitreous enamel, wire-wound power resistors are engineered to meet or exceed MIL-R-26 specifications. Wire windings are finest grade resistance alloy. Designed for utmost reliability and stability under adverse conditions. Teal green enamel finish withstands overheating without peeling or cracking. Tolerance, ±5% except values under 1 ohm, ±10% VPR types (up to 20 watts) have wire lead and lug terminals, illustrated at left. VP and VK types (25 watts and up) have lug terminals, and mounting bracket. **Core Size:** VPR-5-F, 1" x 5/16" dia.; VPR-10-F, 1¾" x 5/16" dia.; VPR-20-H, 2" x 7/16" dia.; VP-25-K 2" x 9/16" dia.; VP-50-K, 4" x 9/16" dia.; VK-100-N, 6½" x ¾" dia.; VK-160-W, 8½" x 1⅛" dia.; VK-200-W, 10½" x 1⅛" dia.

## AXIAL LEAD VITREOUS RESISTORS

deal for printed circuit, terminal board, and point-to-point wiring applications. Space-aving design, due to elimination of mounting brackets and terminal lugs. Standard esistance tolerance, ±5%. Designed for critical applications, providing high stability nd reliability under widely variable environmental conditions. Finished in vitreous hade of teal green. Available in three sizes: 3, 5 or 10 watts. **Size:** VC3D, ¼" dia. x ½" ong; VC5E, ⅜" dia. x 1" long; VC10F, 7⁄16" dia. x 1⅞" long. Leads 1½" long, .032" dia.

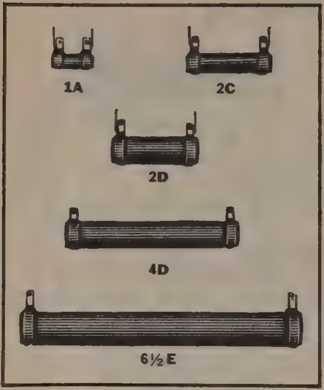
# IRC WIREWOUND POWER RESISTORS

TRW ELECTRONIC COMPONENTS



## FIXED RESISTORS

Exclusive Resisteg® coating assures superior stability; withstands transverse load far in excess of 25 lbs. without mechanical or electrical damage. Rated in accordance with latest MIL specs which limit resistor hot spot to 350° C when suspended horizontally in free air.

**No Derating**—even at high resistance values, these resistors operate at full rated power. **Clean Terminals**—Heat resistant type are carefully processed for easy soldering. **Quality Cores**—Selected ceramic material withstands shock and moisture.

**Premium Windings Uniformly Spaced**—Heavy gauge wire handles overloads without burnouts. Low temperature curing prevents wire shifting; eliminates hotspots and arcing. **Easy Mounting**—Spring loaded, push-in type metal brackets are standard on all sizes. **Resisteg Coat**—Smooth gray finish is craze proof, salt free and chip resistant. **Clear Marking**—Type numbers, resistance value and wattage permanently marked on resistor.

**Type 1A:** Rated 5 watts. Core 1″ lg. x 5/16″ dia. Terminals: 13A. No mtg. hardware supplied. Resistance tolerance, ±5%.

**Type 1¾ A:** Rated 12 watts. Core 1¾″ lg. x 5/16″ dia. Terminals: 13A. No mtg. hardware supplied. Resistance tolerance, ±5%.

# IRC® WIREWOUND POWER RESISTORS

**TRW®**
ELECTRONIC COMPONENTS

## FIXED MILITARY RESISTORS

Vith military stamping; no hardware. acked 1 per box. Terminals: RW30, W31, RW33 and RW35, 12A; RW29 and W32, 13A; all others, 4A. Resis. tolernce, ±5%.

**ype RW29:** Rated 12 watts. Core 1¾" . x 5⁄16" dia. Range: All values, 1–5,600 hms.

**ype RW30:** Rated 12 watts. Core 1" lg. 7⁄16" dia. Range: All values, 1–2,400 ohms.

**Type RW31:** Rated 15 watts. Core 1½" lg. x 7⁄16" dia. All values, 1–10K ohms.

**Type RW32:** Rated 20 watts. Core 2" lg. x 7⁄16" dia. All values, 1–10,000 ohms.

**Type RW33:** Rated 26 watts. Core 3" lg. x 7⁄16" dia. All values, 1–18,000 ohms.

**Type RW35:** Rated 60 watts. Core 4" lg. x ¾" dia. All values, 1–20,000 ohms.

**Type RW36:** Rated 80 watts. Core 4" lg. x 1⅛" dia. All values, 1–20K ohms.

**Type RW37:** Rated 120 watts. Core 6" lg. x 1⅛" dia. All values, 1–20K ohms.

**Type RW38:** Rated 160 watts. Core 8" lg. x 1⅛" dia. All values, 1–20K ohms.

**Type RW47:** Rated 225 watts. Core 10½" lg. x 1⅛" dia. All values, 1–20K ohms.

## MIL-R-10509 HIGH STABILITY PRECISION METAL FILM RESISTORS

### FILM TYPE AND TOLERANCES

Film Type "MF" designates Evaporated Metal Film resistors from IRC Burlington Division. Film Type "MG" designates Metal Glaze from IRC Boone Division. Metal Film, Type MF, resistors are supplied in standard tolerances of ±1.0%, ±0.5%, ±0.25% and ±0.1%. Closer tolerances are available on special order. Metal Glaze, Type MG, resistors are supplied in ±1.0% tolerance only.

**See below for other resistor characteristics.**

### VOLTAGE COEFFICIENT

When measured between 1/10 and full rated voltage, voltage coefficient is typically less than 0.5 ppm/volt, for all values. On low and medium value resistors, the voltage coefficient is essentially zero.

### ELECTRICAL NOISE

All Metal Film resistors demonstrate inherently low noise levels due to the minute size of the individual particles which comprise the film. TRW/IRC Metal Film resistors average 0.10 microvolt per volt (−20 dB) over the standard resistance ranges for a decade of frequency, with low and intermediate values below 0.05 microvolt per volt (−30 dB). Recently developed processing techniques, however, permit a substantial improvement in the higher ranges for applications which require low noise levels; available on special order only.

### FREQUENCY RESPONSE

TRW/IRC Metal Film resistors demonstrate high frequency response which is essentially flat to 5 MHz. Non-helixed units are available for applications employing higher frequencies, on special order.

### LOAD STABILITY

The ΔR due to operation at rated load for 1000 hours is typically less than ±0.1%. Special pre-conditioning (Burn-In, Temperature Cycling, etc.) is available to meet customer specifications.

*These high resistance values, being above the highest MIL-R-10509 top values, have higher temperature coefficients, but otherwise are esigned to meet the requirements of the specification. These high values must be measured carefully under controlled conditions of umidity and temperature, to reduce possible variations due to test conditions and temperature coefficients. The temperature coefficient f deposited carbon is always negative and increases with resistance, therefore values above approximately 2 times MIL maximum will e supplied with a standard tolerance of ±2.0%.

### TOLERANCE

Standard tolerance is ±1.0%, except as xplained above. ±0.5% tolerance is available at a slight additional cost and on imited resistance values.

### VOLTAGE COEFFICIENT

This factor is negligible. Statistically, the voltage coefficient is less than 10 ppm/V.

### FREQUENCY RESPONSE

TRW/IRC Deposited Carbon resistors emonstrate high frequency response which s essentially flat to 5 MHz.

### SHELF LIFE

Shifts in resistance value due to storage at room temperature are less than 0.25%.

### TEMPERATURE COEFFICIENT

The temperature coefficient of Deposited Carbon resistors is always negative and ranges from −150 ppm/° C to −500 ppm/° C in the standard MIL resistance values.

## SPECIAL PRODUCTS

### LOW TC, TIGHT TOLERANCE

Ultra stable metal film resistors are available in temperature coefficients of ±15, ±10 and ±5 ppm/° C with standard tolerances of ±1.0%, ±0.5%, ±0.25%, ±0.1%, ±0.05%, ±0.02% and ±0.01%. The "AR" series of resistor is designed and built to be a no-compromise replacement for precision wire-wound resistors. Possessing all of the characteristics formerly available only in precision wire-wounds (i.e., low temperature coefficients, non-measurable noise, low voltage coefficient and stability under stress), the series also maintains all of the unique characteristics of metal film (i.e., high frequency performance, reliability, pulse stability and resistance/size ratio). Available on special order in the following wattage/max. resistance ratings: 1/20 watt/100K; 1/10 watt/250K; ⅛ watt/500K and ¼ watt/1 meg. Matching available to ±0.001% tolerance and ±0.5 ppm TCR track.

### PRECISION POWER

The "BR" series of resistors is designed to replace wire-wounds in the areas of low power (1 to 3 watts) and semi-precision (±1.0% to ±0.1% tolerance and ±100 ppm to ±25 ppm/° C TC). Maintaining the unique advantages of metal film (i.e., high frequency performance, reliability, pulse stability and resistance/size ratio), this series offers much higher resistance values, much higher voltages, smaller sizes and more uniform heat dissipation (no 350° C hot spots) than comparably rated wire-wounds.

### HIGH TEMPERATURE, HIGH VOLTAGE

For use in design application area where both high temperature and high voltage are present (to 340° C and 15,000 volts), the IRC/TRW "CR" series resistor provides an answer. This series employs a proprietary Carbon Alloy film of such hardness that no protective coating is necessary; consequently there is no outgassing or contamination of any operating environment, whether it be vacuum, oil, inert or air. Although the resistor derates at somewhere above 340° C, it will withstand operating environment temperatures to 1600° F (870° C) and return to within 10% of its original resistance value when the environment cools. Available to wattage ratings of 3 watts at 200° C, resistance values to 200 megs and ±5% tolerance.

### NETWORKS AND LADDERS

Subminiature, precision TaNFilm* flat resistor networks and ladders are available in a variety of standard designs and packages including dual-in-line pack, flat pack, conformal coated or unencapsulated for wirebonding or beam lead attachment. TaNFilm is deposited by continuous sputtering process resulting in a very uniform film so that resistors track within 5 ppm/° C over the full temperature range. TaNFilm is inherently immune to electrolytic attack since the manufacturing process passivates each resistor with an anodized surface layer. Tolerance from ±1.0% to ±0.03%; TCR of 0 to −80 ppm/° C; resistance values from 20–100K ohms.

### FAILURE RATE LEVELS

At 60% confidence level.

| Level | Failure Rate |
|---|---|
| M | 1.0% per 1000 hrs. |
| P | 0.1% per 1000 hrs. |
| R | 0.01% per 1000 hrs. |
| S | 0.001% per 1000 hrs, |

### PHYSICAL DIMENSIONS

Identical with the same IRC type listed under MIL-R-10509 on another page.

### VOLTAGE COEFFICIENT

When measured between one-tenth and full rated voltage is less than 0.5 ppm/volt for all values. MIL-R-55182 permits a maximum of 50 ppm/volt.

### RELIABILITY

Based on the data accumulated in over 170 million government monitored test hours, TRW/IRC Established Reliability resistors have demonstrated a failure rate level of 0.0006%/1000 hrs. The change in resistance during 10,000 Hour Life testing has averaged 0.30%; MIL-R-55182 permits a maximum of 2.00%.

### TEMPERATURE COEFFICIENTS

| MIL Char. | IRC TC Code | Temperature Coefficient |
|---|---|---|
| K | T0 | ±100 ppm/° C |
| H | T2 | ±50 ppm/° C |
| J | T9 | ±25 ppm/° C |

### LEADS

RNR (Solderable) and RNC (Solderable/Weldable—Type C of MIL-STD-1276) are standard. RNN (Weldable—Type N-2 of MIL-STD-1276) also available.

### FREQUENCY RESPONSE

TRW/IRC Metal Film resistors demonstrate high frequency response which is essentially flat to 5 MHz.

### ELECTRICAL NOISE

Evaporated Metal Film resistors are particularly well suited in all applications requiring extremely low noise. Low and intermediate resistance values of TRW/IRC resistors demonstrate noise levels below 0.05 microvolt per volt (−30 dB), while the higher ranges average 0.10 microvolt per volt (−20 dB) over a decade of frequency.

### COMPARISON OF PERFORMANCE

The following table compares the various environmental condition tests required by MIL-R-55182 and MIL-R-10509 with the typical performance of TRW/IRC Metal Film resistors.

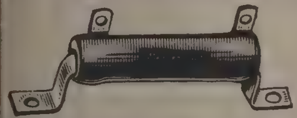
## WIRE-WOUND VITREOUS ENAMELED FIXED RESISTORS



eature welded lugs solidly anchored to ithstand vibration; hot tin-dipped for asy soldering. Shock-absorbing mounting rackets. Multi-layer vitreous enamel coatng locks the uniformly-wound resistance ire in position; seals out moisture. High emperature stability and compatible coefficient of expansion prevents crazing and racking. FRL5, 10 and 20 types are light enough to be mounted by the attached leads. FR types have mounting brackets. **Standard Tolerances:** ±5% all values.

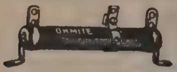
# OHMITE Resistors



## VITREOUS ENAMELED RESISTORS

**Dividohm® Adjustable Type:** Vitreous enameled on ceramic cores with narrow strip of the wire-turns forming a contact surface for the embossed contact of a screwdriver—adjustable lug. A patented percentage of the resistance scale is stamped on the units to make it easy to set the lug at the desired value. **Fixed Resistors:** Lug type, wire-wound on ceramic cores. Wattage ratings are for use in free air.

# Ward Leonard Resistors

## VITROHM® FIXED AND ADJUSTOHM® ADJUSTABLE RESISTORS

Vitrohm Resistors feature ceramic cores, resistance wire with a low-temperature coefficient of resistivity and a vitreous enamel coating developed by Ward Leonard for toughness, hardness, moisture and acid resistance, and good heat conductance. Terminals are tightly clamped to the core and spot-welded. Resistance wire is secured to terminal band by silver-brazing or spot welding. ADJUSTOHM resistors are furnished with one screw-driver type adjustable band terminal. Mounting brackets furnished with all resistors, except 5F, 10F and 20F, furnished only on request. **Tolerances:** Fixed, ± 5%; adjustable, +10%, −5% (entire resistor less band). **Stock Values On Request.**

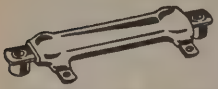
# Ward Leonard Resistors

## STRIPOHM RESISTORS



Vitrohm® construction, but flat design for use where allowable space for component mounting is extremely limited. Strip shape, low silhouette mounting and terminal arrangement permits extra space saving. Suitable for multiple stacking by using 3/32" washers. Push-in type mounting brackets are supplied. **Wattage Ratings:** 20S, 20 watts; 30S, 30 watts; 40S, 40 watts; 55S, 55 watts; 65S, 65 watts and 75S, 75 watts—all in free air based on 300° C rise, 40° C ambient with resistor mounted horizontally on vertical steel plate 12" sq. x .040" th. **Tolerance** ±5%.

# ALLEN-BRADLEY CAPACITORS AND FILTERS

## DISCOIDAL FEED-THRU AND STAND-OFF CAPACITORS

nique and superior performance is offered by these discoidal eed-thru capacitors. Where tubular feed-thru capacitors are subect to parallel resonances, the discoidal feed-thru capacitor offers esonant-free performance to 1 GHz. All are rated at 500 WVDC, 5° C except FW5N, 300 WVDC. Derate to 50% of WVDC at 85° C) for use to 125° C. All capacitors meet MIL-C-11015 here applicable. Hollow eyelet of FW5N provides direct lead ltering. **Tolerances Available:** ±10%, ±20% and GMV (Guarnteed Minimum Value, −0, +100%). Mounting hardware upplied.

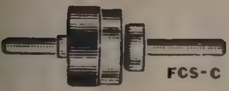
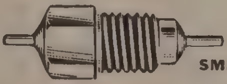
## HIGH FREQUENCY LOW-PASS FILTERS



FCS-C



SMFB

SMFO

Ceramic EMI feed-thru filters provide low shunt impedance to ground for unwanted interference. Indicated attenuation is minimum value from 100 MHz to 10 GHz measured per MIL-STD-220 with series resistor of 50 ohms (no series resistor used for FCS-C) at 0 VDC and 0 amps DC. Maximum RF current 0.25 amp, feed-thru terminal resistance is .01 ohm maximum. Mounting hardware supplied.

# ALLEN-BRADLEY CAPACITORS AND FILTERS

## TYPE CL MULTI-LAYER CERAMIC FEED-THRU CAPACITORS

**Actual Size**

Unique coaxial tubular capacitors consist of concentric layers of an Allen-Bradley proprietary ceramic formulation and concentric layers of noble metals; yields low inductance when compared to conventional rolled dielectric capacitors. Fired capacitors produce true monolithic structures impervious to moisture and contamination. High capacitance-to-volume ratio results in significantly smaller size than equivalent conventional rolled dielectric capacitors. **Temp. Range:** −55° C to +125° C. **Voltage-Temperature Characteristics:** ±65% at 0 volts; +35%, −90% at rated voltage. **Dissipation Factor:** 4% at .1 V rms, 25°, 1 kHz. Dielectric withstanding voltage is three times WVDC.

**MINIMUM INSERTION LOSS, dB**

Per MIL-STD-220. At rated WVDC from −55° C to +125° C insertion loss is typically 6 dB less than indicated.

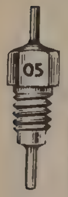
## TYPES MT AND MS MULTI-LAYER CERAMIC FEED-THRU CAPACITORS



**MT**

**MS**

Bolt (**MT**) and solder eyelet (**MS**) mounted low inductance units have high capacitance for superior bypassing from 50 kHz to 1 GHz; primarily for DC operation. **Oper. Temp. Range:** −55° C to +125° C, no voltage derating. **DC Feed-Thru Current:** 10 A. **Dissipation Factor:** 4%. Supplied with hardware. Extra hardware: Lockwasher, **7c;** mounting nut, **5c;** solder washer, **2c.**

**MINIMUM INSERTION LOSS, dB**

At 25° C, 0 VDC (per MIL-STD-220).

## TYPE MB CHIP CAPACITORS

Advanced manufacturing process combines ceramic dielectric and noble metal electrodes into a truly monolithic structure with increased mechanical strength and material homogeneity, virtually lamination-free; small and uniform size, convenient temperature characteristics and ease of bonding make them applicable to most thick and thin film applications. **Operating Temp. Range:** −55° C to +125° C. **Temperature Characteristics:** Designated by seventh digit of A-B Type No.; **A,** +22%, −56%; **B,** 0±30 ppm/° C; **C,** ±15%; **D,** ±22%.

## TYPE B161Y HIGH VOLTAGE CAPACITORS

Dual purpose for standard DC or low frequency AC high voltage use. Dual dielectric of film and Kraft paper, with special impregnant, permits replacing glass tube types. Standard tolerance, ±20%. Operating temp. range, −45° C to +100° C. No. 18 AWG wire leads; available with mtg. studs on special order.

## AEROVOX CAPACITORS

### TYPE 3400 SKY CAP™ EPOXY-DIPPED MONOLITHIC CAPACITORS

3400, TTP

Feature environmental performance to MIL-C-11015 or MIL-C-20. Epoxy-dipped nonolithic construction with solder-coated opper leads. Choice of three temperature haracteristics. **WVDC:** 50 or 100 WVDC s noted; 200 WVDC available on request. Flash test voltage is 3 times rated voltage. **Size:** Types: 3417, .100″ sq. x .100″ thick; 418, .150″ sq. x .100″ th.; 3419, .200″ sq. x 125″ th.; 3420, .300″ sq. x .150″ th.; 3421, 400″ sq. x .150″ th.; 3422, .500″ sq. x .200″ th.

J

Provide high adjacent channel separation through steep-skirted selectivity with flat-topped frequency response. Electrically and mechanically stable over −40° C to +85° C range with frequency variations of only 2 to 10 ppm/° C. **Type J** (e.g., F455J-05) is used in Collins 75A receivers; **FA types,** Collins S-Line. **Type Z** is for commercial and industrial SSB uses. **Size:** FA and Z, 2.5″ w. x .528″ d. x 6″ h. of molded phenolic, hermetically sealed. J type .775″ dia. x 2¾″ h. metal case, hermetically sealed.

## CKR05-CKR06 HIGH RELIABILITY CERAMICS

MIL-C-39014 high reliability version of units listed as CK05-CK06, etc. in MIL-C-11015D. All units meet failure rate level R (0.01%) as indicated by last digit in MIL number, and are marked with this number. Better failure rate (S) types will become available as test time is completed. Capacitance tolerance, ±10% (suffix **KR**) or ±20% (suffix **MR**) as indicated.

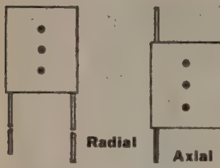
## MINITAN® MODULAR SERIES SUBMINIATURE SOLID TANTALUM CAPACITORS



Precision subminiature polar capacitors suitable for general filtering, coupling, bypassing and non critical RC timing applications. Very favorable capacitance-to-volume ratio makes units ideal for us in high-density applications such as found in avionics systems, subminiature communications equip ment and thick-film circuitry. **Temperature Range:** −55° C to +85° C without derating; to +125° if WVDC derated to ⅔. **ORDERING INFORMATION:** Price table below is keyed to case size; als see Part Number Breakdown Chart. **Lead Configuration:** Add suffix **A** to Basic Part No. for axia leads; add suffix **R** for radial leads. **Tolerance:** Add suffix **-40** for +40% −20% (available only on and **U** case sizes); suffix **-20** for ±20%; suffix **-10** for ±10%; suffix **-05** for ±5%. Only standar tolerance capacitors are stock items, others are special order only; 10% decade values are available ±5% and ±10% tolerances. **Example:** Part No. **F105A-10** indicates a 1.0 μF axial capacitor, case F ±10% tolerance; complete Part No. must include Basic Part No. and both Lead and Tolerance suffixe Capacitance and dissipation factor (DF) measured at 25° C, 120 Hz; DC leakage measured at 25°

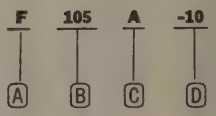
### PART NUMBER BREAKDOWN CHART



Ⓐ **Case Size**—W, U, F, M L, S or J as required; pricing is keyed to case size.

Ⓑ **Capacitance**—First two digits are significant figures, last digit is the power of 10 (or the number of zeros) of the multiplier; all values measured in pF.

Ⓒ **Lead Configuration**—"A" indicates axial leads; "R" indicates radial leads.

Ⓓ **Tolerance**—Suffix "-40" for +40% −20%; "-20" for ±20%; "-10" for ±10%; "-05" for ±5%. Only indicated standard tolerances are stock items; all others are special order only.

## MINITAN® CORDWOOD SERIES SUBMINIATURE SOLID TANTALUM CAPACITORS

recision subminiature polar capacitors suitable for general filtering, coupling, bypassing and non-ritical RC timing applications. Very favorable capacitance-to-volume ratio makes units especially vell suited to high-density applications such as found in avionics systems, subminiature communica-ions equipment and thick-film circuitry. **Temperature Range:** −55° C to +85° C without derating; erate WVDC linearly to ⅔ at +125° C. **ORDERING INFORMATION:** Price table below is keyed o case size; also see Part Number Breakdown Chart. **Lead Configuration:** Add suffix **A** to Basic Part No. for axial leads; add suffix **R** for radial leads. **Tolerance:** Add suffix **-40** for +40% −20% (available nly on **Y** and **P** case sizes); suffix **-20** for ±20%; suffix **-10** for ±10%; suffix **-05** for ±5%. Only tandard tolerance capacitors are stock items, others are special order only; 10% decade values available in ±5% and ±10% tolerances. **Example:** Part No. **B105A-10** indicates a 1.0 μF axial capacitor, ase F, ±10% tolerance; complete Part No. must include Basic Part No. and both Lead and Tolerance uffixes. Capacitance and dissipation factor (DF) measured at 25° C, 120 Hz; DC leakage measured t 25° C.

## MILITAN® TS SERIES CS12/13 STYLE HERMETICALLY SEALED SOLID TANTALUMS

Miniature polar capacitors designed to meet or exceed performance and environment requirement of MIL-C-26655; available with polyester insulating sleeve (CS13 style) or with bare metal ca (CS12 style). Suitable for general filtering, coupling, bypassing, non-critical RC timing and energy storage applications. **Temperature Range:** −80° C to +85° C without derating; derate WVDC linearly to ⅔ at +125° C. **Tolerance:** Available in ±20%, ±10% and ±5%. **Dissipation Factor:** At 25° C, will not exceed 6% for 6–20 WVDC units, 5% for 35 WVDC units, 4% for 50 and 75 WVDC units and 3% for 100 WVDC units. **DC Leakage:** At 25° C, will not exceed .01 μA/μF-V or 0.5 μA, whichever is greater; at +85° C, 0.1 μA/μF-V or 5.0 μA, whichever is greater; at +125° C, .125 μA/μF-V or 6.3 μA, whichever is greater. **ORDERING INFORMATION:** Pricing is keyed to case size (i.e., TS1, TS2, TS3, TS4). **Tolerance:** Add suffix **-20** to Components No. for ±20%; **-10** for ±10%; **-05** for ±5%. **Unsleeved Units:** Add suffix **-U** to Components No. after tolerance suffix (e.g., TS1-006-565-20-**U**); with no suffix, unit will be delivered with polyester insulating sleeve.

## MILITAN® TR SERIES SOLID TANTALUMS TO MIL-C-39003, STYLE CSR13

eets or exceeds applicable requirements of MIL-C-39003, case style CSR13 (units insulated with lyester sleeve). **Temperature Range:** −55° C to +85° C without derating; derate WVDC linearly to at +125° C. **ORDERING INFORMATION:** Prices are keyed to Components No. case designations e., TR1, TR2, TR3, TR4). **Tolerance:** For MIL numbers, add suffix **K** for ±10%, **J** for ±5%, or for ±20% (where available); for Components numbers, add suffix **-10** for ±10%, **-5** for ±5%, **-20** for ±20% (where available); e.g., CSR13B685**K** and TR1-006-685-**10. Failure Rate Level:** ld suffix **L** to both MIL and Components numbers for 2%/1000 hrs., **M** for 1%/1000 hrs., **P** for %/1000 hrs., or **R** for 0.01%/1000 hours (e.g., CSR-13B685K**L** and TR1-006-685-10-**L**).

# Tantalum Capacitors

## ECONOTAN® SERIES EPOXY SEALED SUBMINIATURE SOLID TANTALUM CAPACITORS

Precision polar capacitors suitable for general filtering, coupling, energy storage, bypassing and non-critical RC timing applications. Voidless construction allows excellent shock and high-frequency vibration characteristics. Designed especially for high-volume consumer and industrial applications; combines low cost and small size with precision electrical and dimensional tolerances. **Temperature Range:** −55° C to +85° C without derating. **Tolerance:** ±20% and ±10% standard. **DC Leakage:** Will not exceed .01 μA/μF-V or 0.5 μA at rated WVDC, whichever is greater, at 25° C operating temperature; will not exceed 0.1 μA/μF-V or 5 μA, whichever is greater, at 85° C. **ORDERING INFORMATION:** Prices are keyed to case size. **Tolerance:** Add suffix **-20** for ±20% or suffix **-10** for ±10%. **Sleeving:** Polyester insulating sleeve is standard.

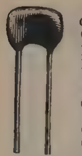
# CORNELL-DUBILIER Mica Capacitors

## CD6—CD42 DIPPED SILVERED MICAS



**Range:** −55° C to +125° C. **Temp. Characteristic:** Indicated by 3rd letter in number (e.g., CD10CD050D): C, ±200 ppm/° C (drift, ±0.5%); E, −20 to +100 ppm/° C (drift, ±sum of 0.1% and .1 pF); F, 0 to +70 ppm/° C (drift, ±sum of 0.05% and .1 pF). **Tolerance:** ±5% unless otherwise noted (many values available in ±20%, ±2%, ±1%). **Voltage:** 500 WVDC unless otherwise noted. Only commercial types listed. For MIL type, change prefix CD10 to CM04, CD15 to CM05, CD19 to CM06, CD30 to CM07, or CD42 to CM08. **Note:** CD6 and CD7 types not available in MIL version.

## TYPE MMW MINIATURE METALLIZED POLYESTER FILM TUBULARS

22 MFD
400 VDC

Extremely small size for transistorized circuits. Metallized polyester dielectric in tough film wrap and sealed with high-density, thermosetting resin end fill. Extra rong and durable; high capacitance stability, resistance to oisture and humidity. **Temperature Range:** −55° C to +85° C, t rated voltage; to +125° C with derating. **Tolerance:** ±20%. **ize:** Min. .180″ dia. x 9/16″ lg. to .950″ dia. x 1¾″ lg.

# CDE CORNELL-DUBILIER Capacitors

## TYPE MFP FLAT MYLAR® WRAP CAPACITORS

Similar to type WMF capacitors but designed with a flat, pressed section to give an oval configuration. Mylar dielectric, tough yellow outer film wrap and epoxy end seals. High resistance to humidity. **Operating Temperature:** −55° C to +125° C at full voltage; derate 10% at 100° C; 50% at 125° C. **Tolerance:** ±10%, 50 WVDC; ±20%, all others. Other tolerances also available; prices on request. ®Reg. DuPont TM.

## TYPE NLW SUBMINIATURE ELECTROLYTIC CAPACITORS

hallest subminiature electrolytic capacitors. Welded construc-
n, hermetically sealed in an aluminum case and provided with
astic insulating sleeve. **Temp. Range:** −40° to +105° C.
**lerance:** −10%, +75%.

# CDE CORNELL-DUBILIER Capacitors

## TYPE FAH COMPUTAMITE® COMPUTER GRADE CAPACITORS

High capacitance DC aluminum electrolytics for use where banks of high capacitance filters are required. Long life, with low leakage current, minimum ESR, high 120 Hz ripple currents. Molded terminal block with safety vent seal; provided with screw terminals. With plastic insulating sleeve. Operating temperature −40° C to +85° C. **Tolerance:** 3–50 WVDC, −10 +100%; 51–350 WVDC, −10 +75%; 351–450 WVDC, −10 +50%.

# CDE CORNELL-DUBILIER Capacitors

## TYPE WHB COMPUTAMITE® COMPUTER GRADE CAPACITORS

ll welded, aluminum electrolytic capacitors are miniature size nd computer quality. Feature unique anode terminal and seal esign. Long life, highly vibration resistant with low leakage urrent, high 120 Hz ripple currents. Standard WHB capacitors re polarized; semi-polarized or non-polarized available on request. perating temperature −40° C to +85° C. **Tolerance:** Up to 75 WVDC, −10 +75%; above 75 WVDC, −10 +50%; closer tolrances available on request.

# CORNING® Glass Capacitors

## CYK MINIATURE GLASS-K™ CERAMIC CAPACITORS

Larger capacitance values suitable for point-of-use filtering in computers; bypassing and coupling elements in miniaturized circuitry. Smaller capacitance values suitable for more critical circuit functions. Ideal for automatic insertion. **Temperature Range:** −55° C to +125° C. **Insulation Resistance:** 10,000 megs or 1,000 megs-μF, whichever is less. **Dissipation Factor:** Stability characteristic T less than 1%; U less than 1.5%; V less than 3%. **WVDC:** 50 V. **Size:** CYK01, 0.100" dia. x 0.250" lg.; CYK02, 0.140" dia. x 0.250" lg. **Note:** Prices apply to standard capacitance decade values only; non-standard value prices on request.

## CYK MINIATURE GLASS-K™ BX CAPACITORS

Performance characteristics in accordance with MIL-C-11015. Exclusive glass-ceramic dielectric and unique manufacturing process assure true monolithic structure. Used in bypass, filter and coupling circuits, R-C networks; point of use filtering; suited for automatic insertion. **Temperature Range:** −55° C to +125° C. **Insulation Resistance:** 100,000 megohms or 1,000 megohm-microfarads, whichever is greater. **Dissipation Factor:** 2.5% max. **WVDC:** 50 and 100 V. **Size:** CYK12, .160" lg. x .090" dia.; CYK13, .250" lg. x .090" dia.; CYK14, .390" lg. x .140" dia. **Tolerance:** Suffix K, ±10%; M, ±20%.

# CORNING® Glass Capacitors

## CYFM GLASS CAPACITORS

sion-sealed, environment-proof capaci- s have glass-to-metal seals at leads. Foil l glass element is frozen inside glass. et or exceed MIL-C-11272B require- nts. Subjected to moisture resistance ditions of MIL-STD-202A, Method A for 1200 hours without failure or deg- ation. **WVDC:** 300 and 500 V, −55° C +125° C. **Temperature Coefficient:** 40 (±25) ppm/° C at 100 kHz. Varies m +115 ppm/° C at −55° C to +165 n/° C at +125° C. Max. deviation, 5 n. Drift less than 0.1% or 0.1 pF, ichever is greater. **Tolerance:** Standard, % or ±0.25 pF, whichever is greater; 0%, ±2% and ±1% on request.
